Save91 / SaveMore

Working name, to be finalised

Daily saving, online first

For India's self-employed: ₹100 a day by UPI into mutual funds in the saver's own name; the app never holds money. 9 in 10 savers online, 1 in 10 at the doorstep. Business model v4, on the founders' 24 October inputs.

October 2026 · Confidential · Piyush (CEO) and Sandeep (CPTO)

₹143 cross-sell

loans and cards alone, per saver in 5 years (₹173 in 8): 0.29× and 0.35× of the ₹495 to win a saver, before serving; less than the ₹190 / ₹225 to serve them, so alone it never pays back (−0.10× after serving)

0.75× LTV/CAC

with fund fees, net of serving: one online saver brings back 0.75× of its ₹495 cost in 5 years and 1.32× in 8

Month 75

when the saver pays back; 8 in 10 of 1,000 runs of the model (retention and the debt fund's fee picked at random in their ranges) fall between month 64 and after month 96

Not by year 8

for the company's EBITDA (operating profit before interest, tax and depreciation) to turn positive at 20,000 online savers a month; it needs $9.3M+, as the cash hole is still deepening at month 96

At market numbers this is a fund-fee business; loans are a small add-on. LTV/CAC = what a saver brings in over 5 or 8 years, less the cost of serving them, divided by what it costs to win them: ₹450 at scale (the founders' figure) plus our 10% contingency = ₹495.

Still to confirm in writing: the main case assumes debits cost us ₹0 and a 0.75% equity fund fee; ₹2 a weekly debit, or a 0.5% fee, would cut a saver to about 0.39× or 0.49×.

What it takes (page 8): 2× needs ₹161 a day, 41% still saving and loans most of the way to our old targets, for profit from month 68 on $5.1M; 3× needs 94% of the way on every upside lever. Four facts decide most of it, all cheap to get (page 10). What changed on 24 October: A12, page 25.

THE SAVER'S PROBLEM, NOT OURS

Anyone can sign up savers; a product built for how they save and borrow is still missing, and the market is big enough for more than one winner

1 Sold on “believe me”

- ✗ An investment person they know picks the product. Nothing is written down.
- ✓ A written rule they can see: why this fund, in one sentence.

2 Can't start small alone

- ✗ A small instalment happens today because someone comes to collect it.
- ✓ ₹100 a day by UPI Autopay, set up in minutes; an agent for 1 in 10.

3 Forgotten after joining

- ✗ Nobody comes back to ask what else the saver needs.
- ✓ Streaks, nudges and an AI money coach in the app.

4 Saves a little, then stops

- ✗ Some keep saving; many drop off.
- ✓ Saving improves the offer: the longer the streak, the better the loan limit and rate (our proposal).

What savers think the product is: a wallet they save into and then borrow from, an overdraft-like line. Our answer keeps the money in funds in the saver's own name (the app never holds it) and lets saving improve the loan offer.

Sources: practitioner conversations, 17–18 Oct 2026 (customer problem notes; the wallet reading is the founders' own).

WHAT WE BUILD

Four releases in 18 months; 9 in 10 savers come online, 1 in 10 through a doorstep agent

1 Save
Months 1–3 · live in month 4

- ✓ Sign-up with e-KYC and a bank check
- ✓ Daily saving from ₹100, likely in one hybrid fund
- ✓ One UPI Autopay mandate
- ✓ Withdraw any day: back in 1–3 working days; equity funds may charge an exit fee in year 1

2 Habit
Months 4–9

- ✓ Goals, streaks and nudges
- ✓ Referrals (no cashback, by rule)
- ✓ Doorstep agent app for the pilot
- ✓ Savings analytics

3 Offers
Months 7–12

- ✓ Loan offers for users who opt in; saving improves them
- ✓ Insurance via a broker (fixed fee)
- ✓ Credit cards from issuers
- ✓ Shown only when relevant

4 Score and plan
Months 10–18

- ✓ Savings-record score
- ✓ AI money coach
- ✓ Wallet-like view; money stays in funds
- ✓ Better offers for steady savers

WHERE SAVERS COME FROM

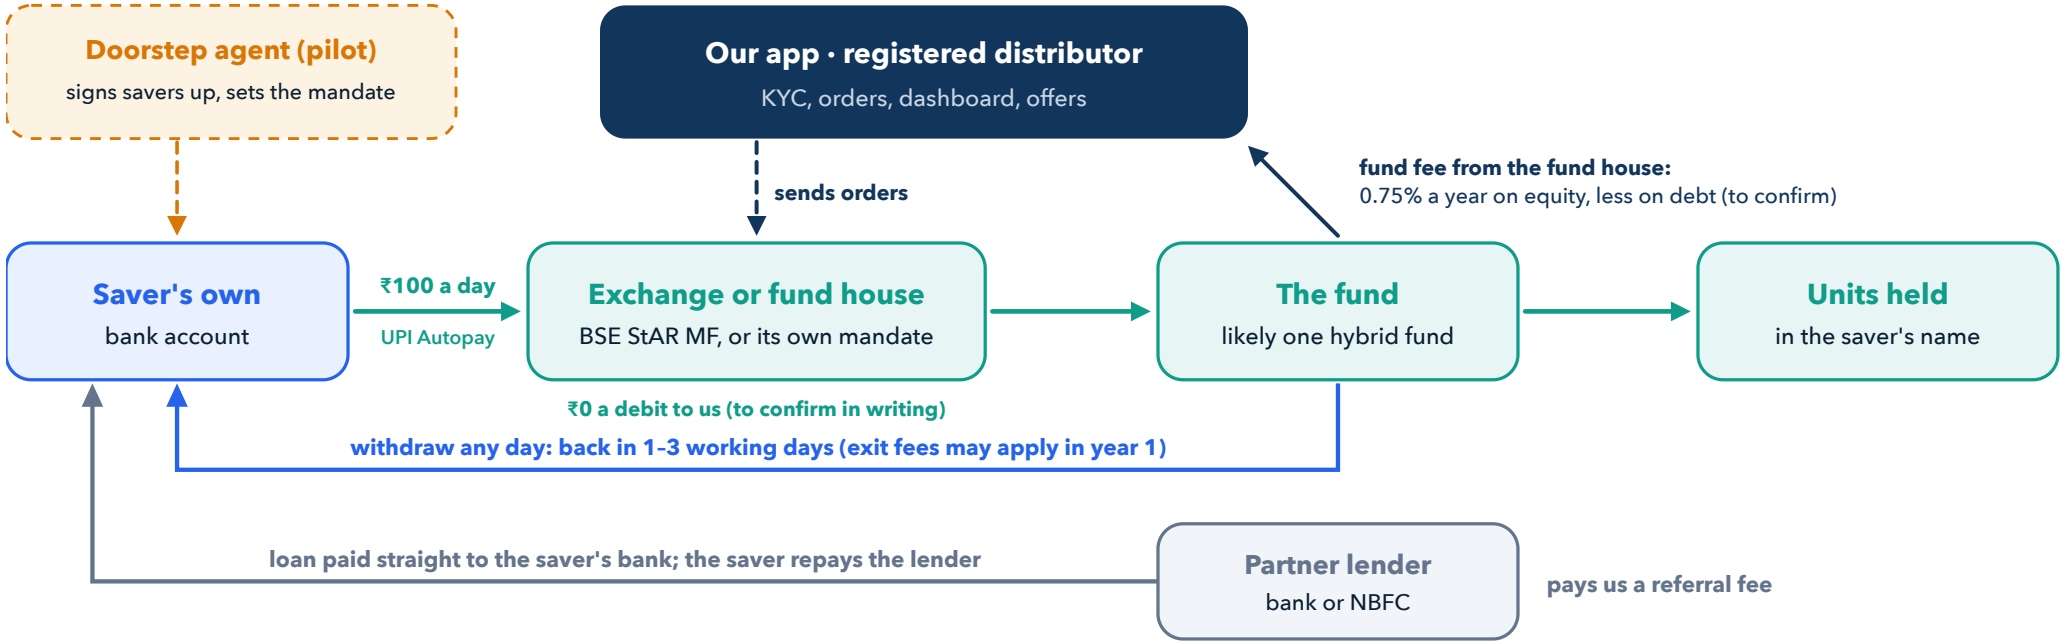

ONLINE • 90% OF SAVERS
app, referrals and ads. Cost to win a saver (marketing + KYC, the identity check): ₹450 at scale (the founders' figure), ₹600 budgeted in the seed; + our 10% contingency

DOORSTEP 10%

Doorstep agents sign savers up and set the UPI mandate; they never handle cash. The pilot runs in NCR with 2 agents; online is pan-India.

THE MONEY FLOW

Money goes from the saver's bank to a fund in their name, never through us

In the saver's name, never through us

Units sit with the fund house, registered to the saver. The app never holds anyone's money.

One hybrid fund at ₹100 a day

Daily minimums are about ₹100 a scheme, so ₹80 equity + ₹20 debt likely becomes one hybrid fund. The model's 80/20 blend earns us 0.64% a year, so that fund's fee must be about 0.64% or more.

Paid by partners

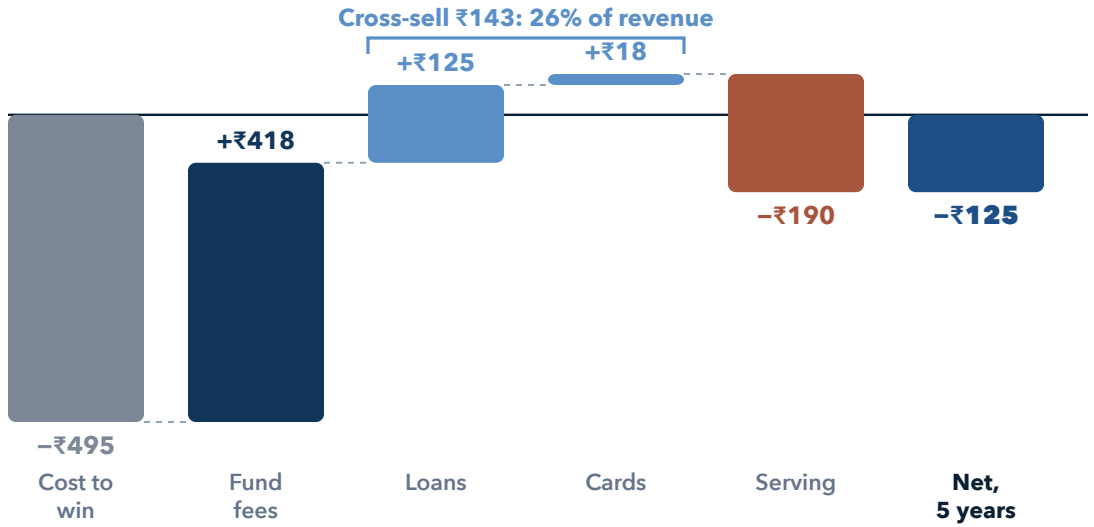

Fund houses and lenders pay us; the saver pays us nothing. A regular plan costs the saver about 0.5–1% a year more than a direct plan; we say so up front.

UPI Autopay mandate: a standing debit the saver approves once. SIP: a standing order to invest on a schedule. SEBI: payments come from the investor's own account. BSE StAR MF's exchange SIP is free to distributors (fund houses pay BSE); ₹0 a debit to us is not yet in writing (A16, page 29). NBFC = non-bank lender.

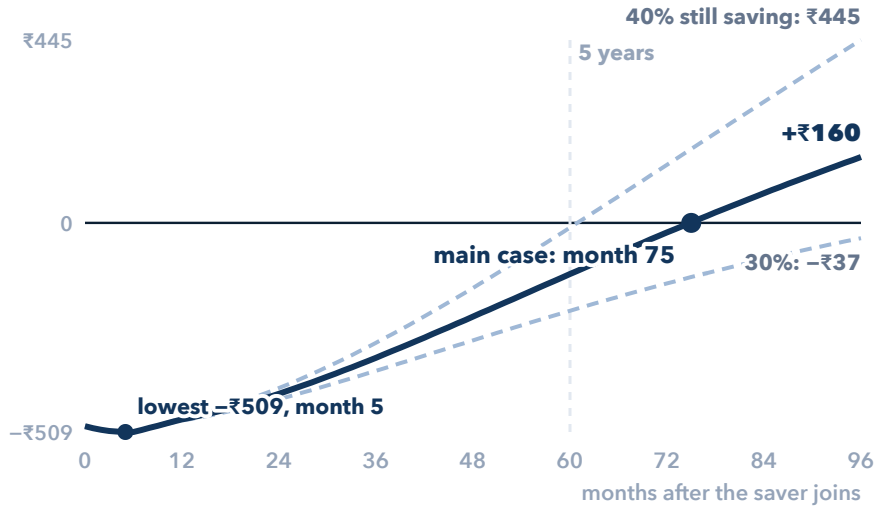

LTV / CAC, THE MAIN CASE

A saver won online costs ₹495 and returns ₹370 over five years in the main case: 0.75× LTV/CAC, paid back in month 75

ONE ONLINE SAVER WON, FIRST 5 YEARS (₹)

WHEN IT PAYS BACK: CUMULATIVE ₹ PER SAVER WON

0.75× in 5 years, 1.32× in 8

LTV/CAC: what a saver brings in over 5 or 8 years, less the cost of serving them, divided by what it costs to win them (₹495). Undiscounted.

Cross-selling doesn't cover serving

Loans ₹125 and cards ₹18 bring ₹143, less than the ₹190 of serving: 0.29× of the cost to win before serving, −0.10× after. Fund fees bring the rest.

Retention is the swing

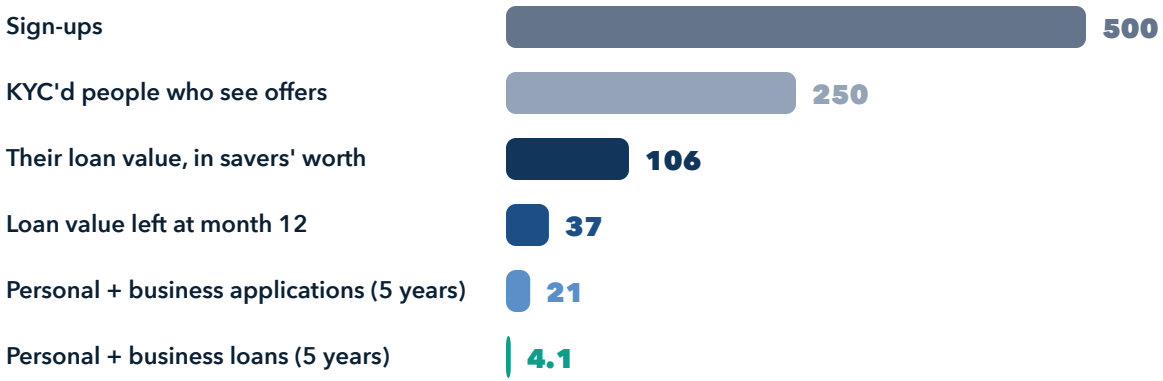

At 30% still saving a year the saver returns 0.57× and does not pay back by year 8; at 40%, 0.98×, paid back in month 61.

Main case: the Monte Carlo median (35%, then 2.0% stop a month still saving after a year, a 0.22% debt fund fee). ₹100 a day; 80/20 equity and debt funds. Serving = ₹5 support a month per saver still saving and ₹4 tech for each of the 1.06 people reached (KYC'd: finished the identity check), plus the 10% contingency; debits ₹0. Cost to win ₹450 + 10% = ₹495; at ₹600 (₹660 with the contingency) a saver is about 0.56× / 0.99× and the company needs $12.0M+. Not in this view: the company's fixed costs (team, office, brand).

THE LOAN FUNNEL, MAIN CASE

Of 100 online savers won, 11 loans worth ₹12 lakh follow in five years, earning us ₹125 a saver; the 150 KYC'd sign-ups who never save add only 6 savers' worth

PER 100 ONLINE SAVERS WON

LOAN TYPE	LOANS PER 100 SAVERS WON, 5 YEARS	AVERAGE LOAN	LENDER PAYOUT	OUR FEES A SAVER WON
Personal + business (with top-ups)	4.2	₹68,219	2%	₹57
Gold	2.9	₹1,00,000	0.5%	₹15
Loan against property	0.4	₹5,00,000	1%	₹18
Home	0.2	₹12,00,000	0.5%	₹15
Consumer durable	2.6	₹20,000	2%	₹11
Two-wheeler / e-rickshaw	0.7	₹1,50,000	1%	₹10
All loans	**11**			**₹125**

About 2.5 KYC'd people a saver, worth 1.06

5 sign-ups a saver, half finish KYC (the identity check). The 1.5 who never save fade within about 3 months, before lenders approve most new users: together worth 0.06 of a saver, a weight, not a head count.

20% apply a year, 20% approved

Today's market, no yearly rises: the founders' figure, between 11% (an app lender's new applicants) and 25% (our past data). Repeats 70%, gold 70%, home and property 45%.

₹70k first loans, a 2% payout

As the lender's referral partner we earn 2% of each personal or business loan, flat (the middle of the market's 1–3%), and 0.5–1% on gold, property and home loans. Repeats are 10% bigger a year.

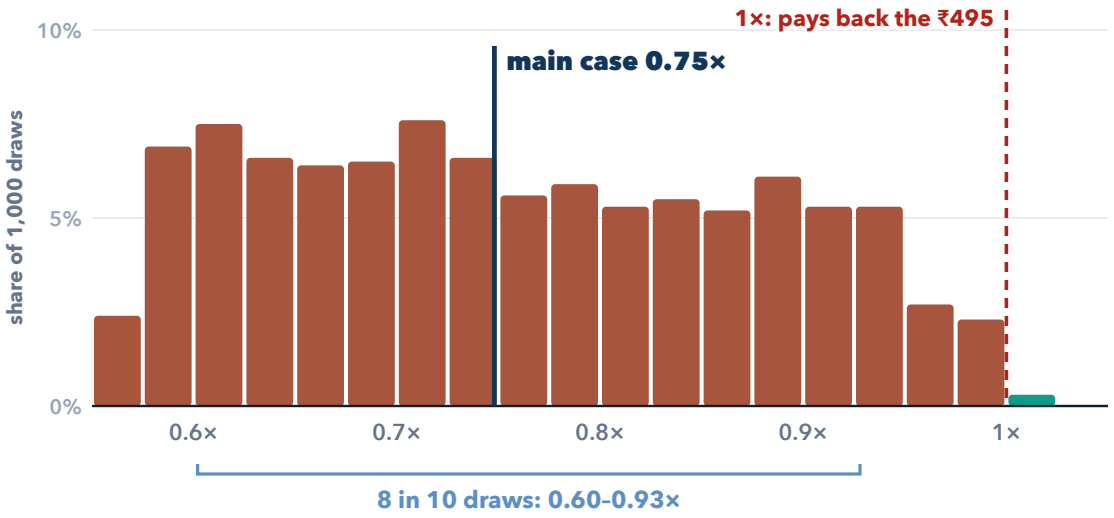

What cross-selling can do: all three loan numbers at our old targets together (applying 35%, approval 30%, yearly rises) give 1.12× and profit from month 85 on $6.0M (A9, page 22). Loan fees arrive early; fund fees build slowly with the balance.

Main case: the founders' 24 October market inputs. Top-ups: 15% a year at 40% of the loan. Applications: 70% personal or business, 15% gold, 3% property, 2% home; durable (₹20k) and two-wheeler loans go to savers only, outside the funnel. Not counted: loans against savings (10% of applications). About 1 in 25 reachable users gets a first loan a year. Benchmarks: A15, page 28.

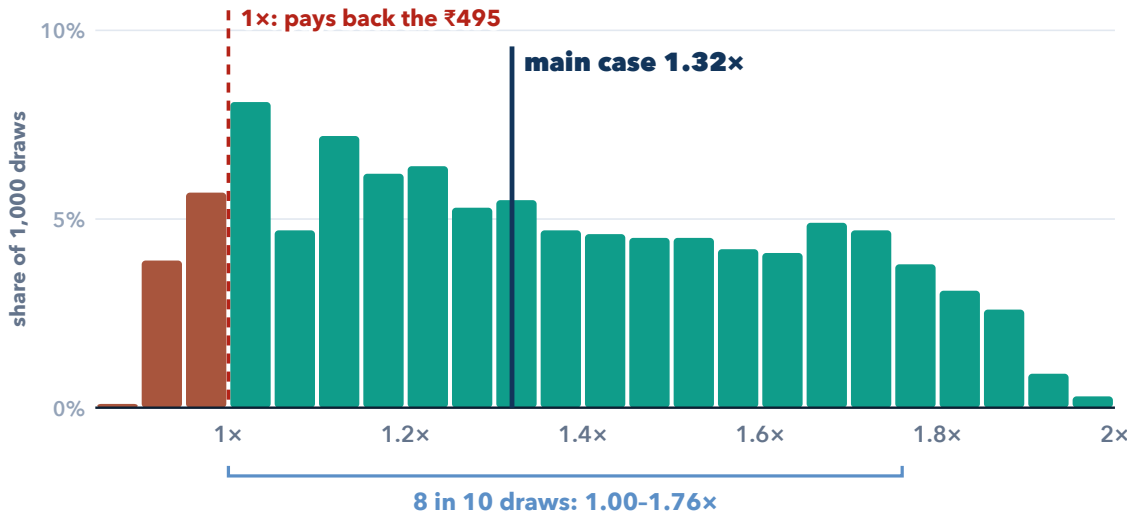

WHAT'S UNCERTAIN

What's still uncertain is mostly how long savers keep saving: 0.60–0.93× at 5 years, 1.00–1.76× at 8 (8 in 10 draws)

AFTER 5 YEARS — **0.3% of the draws reach 1×**

AFTER 8 YEARS — **90% reach 1×**

Two inputs are still uncertain

Still saving at 12 months (Bachatt's 30–40%) and the debt fund's fee (0.10–0.35%). Everything else is fixed by the founders: market figures, Bachatt, or our judgement.

Retention decides it

At 30% still saving the median is 0.57×; at 40%, 0.98×. The debt fund's fee moves it only from 0.72× to 0.79×. In 8 in 10 draws a saver pays back from month 64 to not by month 96.

The company, in every draw

EBITDA is not positive by month 96 in any of the 1,000 draws. 8 in 10 draws need $8.8M+ to $9.8M+: the company is still losing money at month 96.

The Monte Carlo: we ran the model 1,000 times, picking retention and the debt fund's fee at random within their ranges. 0.3% of the 1,000 draws reach 1× in 5 years, holding everything else at the main case (cost to win ₹495). The main case is the median draw; 8 in 10 draws fall between the 10th and 90th percentiles. Undiscounted.

WHAT IT TAKES: THE COMPANY AT EACH LTV/CAC

What it takes: 2× needs ₹161 a day and 41% still saving, with loans most of the way to our old targets, for profit from month 68; 3× needs ₹194 a day and 44%

LTV/CAC, 5 YEARS	₹ A DAY	STILL SAVING	APPLY A YEAR	APPROVED	YEARLY RISES	8 YEARS	EBITDA POSITIVE	MONEY NEEDED
0.75× 0.57–0.98× at 30–40% still saving	₹100	35% (30–40%)	20%	20%	none	1.32×	not by month 96 $8.7M+ to $9.9M+ at 40–30%	$9.3M+
1.00×	₹115	36%	22%	22%	+0.8% / +1.5%	1.79×	not by month 96	$8.1M+
2.00×	₹161	41%	29%	26%	+3.1% / +6.1%	3.79×	month 68	$5.1M
3.00×	₹194	44%	34%	29%	+4.7% / +9.4%	5.99×	month 55	$4.0M

One company, one main case

Every row is the same company: 20,000 online savers a month from month 30, the same team and cost to win. The rows say what would have to be true, not a second plan.

Five levers move together

From the main case towards the upside: ₹100 → ₹200 a day, still saving → 45%, applying 20% → 35%, approval 20% → 30%, yearly rises none → +5% / +10%. Teal: a lever above the main case.

Every lever at its upside

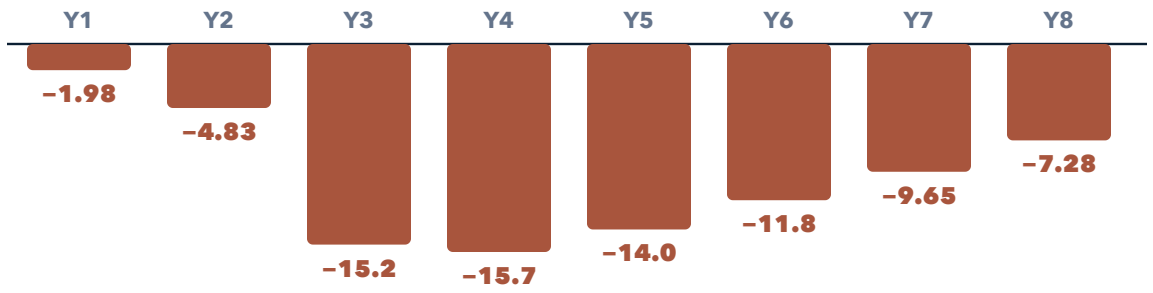

3.20×: the company turns positive in month 54 on $3.9M.

Band: the main case with still saving anywhere in Bachatt's 30–40%, every other input held. EBITDA: operating profit before interest, tax and depreciation. Money needed = the seed + the deepest cash hole (fees arrive 2 months after they are earned) + a ₹5 crore cash buffer, at ₹95 = $1; + means the company is still losing money at month 96, so it needs at least this (if run on, the cash hole bottoms around year 12 at about $10.6M). Doorstep savers (1 in 10) carry the same levers. Undiscounted.

THE COMPANY, YEAR BY YEAR

The main case: EBITDA is still −₹7.28 Cr in year 8, so it is not positive by month 96; the company needs at least $9.3M, and 8 years add up to −₹80 Cr

EBITDA (OPERATING PROFIT) BY YEAR, ₹ CRORE

Not by month 96
EBITDA is still −₹7.28 Cr in year 8: the company does not turn profitable within 8 years.

At least $9.3M
money needed in all, seed included; still rising at month 96 (if run on, it bottoms around year 12 at about $10.6M).

−₹80 Cr
EBITDA added up over 8 years, undiscounted.

	Y1	Y2	Y3	Y4	Y5	Y6	Y7	Y8
Active savers at year end, lakh	0.10	0.48	1.88	2.76	3.44	3.97	4.39	4.71
Revenue, ₹ Cr	**0.04**	**0.28**	**1.74**	**4.61**	**7.78**	**11.2**	**14.7**	**18.0**
fund fees	0.02	0.13	0.81	2.55	4.99	7.85	10.8	13.8

Cost to win savers, ₹ Cr	−0.76	−2.53	−10.8	−11.9	−11.9	−11.9	−11.9	−11.9
Team, ₹ Cr	−0.42	−1.06	−2.15	−2.79	−3.24	−3.66	−4.30	−4.75
Other costs, ₹ Cr	−0.85	−1.52	−3.98	−5.61	−6.63	−7.44	−8.11	−8.62
EBITDA, ₹ Cr	**−1.98**	**−4.83**	**−15.2**	**−15.7**	**−14.0**	**−11.8**	**−9.65**	**−7.28**
Cumulative EBITDA, ₹ Cr	−1.98	−6.81	−22.0	−37.7	−51.7	−63.5	−73.1	−80.4

20,000 online savers a month from month 30 after the seed, 1 in 10 from the doorstep; cost to win ₹600 in the seed and ₹450 after. EBITDA: operating profit before interest, tax and depreciation. Loans: personal and business loans plus other lenders' gold, property, home, durable and vehicle loans. Other costs: tech, payments, support, office, compliance, brand and the 10% contingency. Money needed = the seed + the deepest cash hole (fees arrive 2 months after they are earned) + a ₹5 crore cash buffer, at ₹95 = $1; + means the company is still losing money at month 96, so it needs at least this (if run on, the cash hole bottoms around year 12 at about $10.6M).

THE FOUR FACTS TO GET NEXT

Four facts decide most of the answer, and all four are cheap to get: two questions to Bachatt and two answers in writing

THE FACT, AND HOW CHEAPLY WE CAN GET IT

1 Bachatt's average daily amount

Ask Bachatt for the average, not the minimum. ₹100 is our product's floor; Bachatt's own minimums are lower (₹51/₹101 a day; ₹20 for its liquid fund).

Company: ₹200 a day gives profit from month 76 on $5.9M.

2 Bachatt's exact share still saving at 12 months

Ask Bachatt for its 12-month cohort curve; it has told us 30–40%.

40.5% alone gives 1×; 45% (1.0% a month stopping after) needs $7.8M.

3 Debits at ₹0 to us, in writing

BSE StAR MF and the fund houses: a daily ₹100 debit on one mandate, at no cost to us.

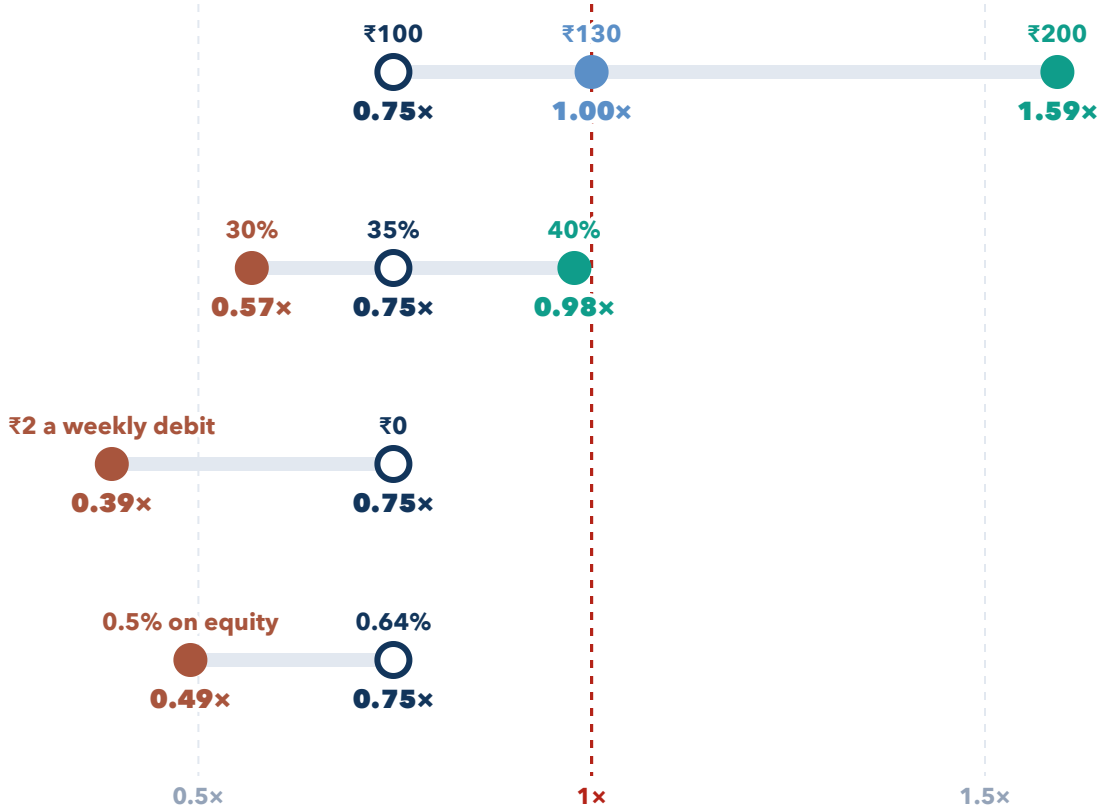

Company: paying ₹2 a weekly debit raises the money needed to $11.7M+.

4 The fee on the fund the ₹100 goes into, in writing

0.64% blended or better: 80% equity at 0.75%, 20% debt at ~0.22%. Daily minimums are ~₹100 a scheme, so one hybrid fund must pay about 0.64% or more.

Company: at 0.5% on equity the money needed is $10.6M+.

ONE SAVER'S LTV/CAC, 5 YEARS, EITHER WAY

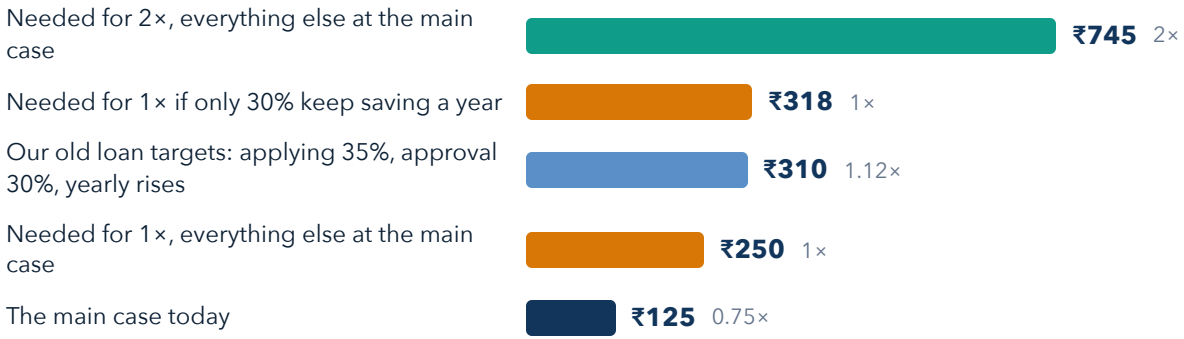

Open circle: the main case (0.75×). Retention: the Monte Carlo median with still saving pinned at 30%, then 40%. The other rows change one input at a time from the main case. None of the four needs the seed's money: two data requests and two confirmations in writing.

WHAT LOANS WOULD HAVE TO BRING

Loans would have to bring ₹250 per saver won, not ₹125, to pay back the cost to win in 5 years; 2× needs ₹745, and our old loan targets bring ₹310

LENDER FEES PER ONLINE SAVER WON, FIRST 5 YEARS (₹)

What that means in loans: personal and business loans per 100 savers won over five years if they alone made up the gap, at today's ₹1,351 to us a loan (₹70k first loans at a 2% payout, repeats a little bigger).

	LOANS PER 100 SAVERS, 5 YEARS	LENDER FEES A SAVER
The main case today	4	₹125
For 1×	13	₹250
For 1× at 30% still saving	18	₹318
For 2×	50	₹745

Why this number

The cost to win is the founders' figure and fund fees follow the balance, so what lenders pay is what loans would have to move. Today loans are 22% of a saver's revenue.

Today's market

20% of the users we can reach apply for a loan a year and 20% of first loans are approved; no yearly rises. Even our old targets for all three give 1.12×.

What the seed measures

Month by month: the share of KYC'd users who opt in to offers, first loans per 100, the median approved loan, and the fee lenders pay after refunds to lenders, in writing.

Lender fees per saver won: every loan referral fee from one online saver won and the KYC'd sign-ups who came with them, over five years, after refunds to lenders. Cost to win ₹495 throughout (₹450 at scale, the founders' figure, plus our 10% contingency). Main case: the Monte Carlo median of still saving at 12 months and the debt fund's fee; everything else at the founders' 24 October inputs. Needed: the lender fees that, with fund fees, cards and serving at the main case, give that LTV/CAC.

FOUR FACTS NOW, THEN THE SEED

Four facts we can ask for now decide most of the answer; the $0.5M seed then measures our own savers, loan funnel and cost to win

1

Bachatt's average daily amount

Ask Bachatt for the average, not the minimum. ₹100 is our product's floor; Bachatt's own minimums are lower (₹51/₹101 a day; ₹20 for its liquid fund).

₹100: 0.75× · ₹130: 1.00× · ₹200: 1.59×

Company: ₹200 a day gives profit from month 76 on $5.9M.

2

Bachatt's exact share still saving at 12 months

Ask Bachatt for its 12-month cohort curve; it has told us 30–40%.

30%: 0.57× · 35%: 0.75× · 40%: 0.98×

40.5% alone gives 1×; 45% (1.0% a month stopping after) needs $7.8M.

3

Debits at ₹0 to us, in writing

BSE StAR MF and the fund houses: a daily ₹100 debit on one mandate, at no cost to us.

₹2 a weekly debit: 0.39× · ₹0: 0.75×

Company: paying ₹2 a weekly debit raises the money needed to $11.7M+.

4

The fee on the fund the ₹100 goes into, in writing

0.64% blended or better: 80% equity at 0.75%, 20% debt at ~0.22%. Daily minimums are ~₹100 a scheme, so one hybrid fund must pay about 0.64% or more.

0.5% on equity: 0.49× · 0.64%: 0.75×

Company: at 0.5% on equity the money needed is $10.6M+.

THEN THE SEED MEASURES OUR OWN SAVERS

$0.5M

the seed: build, licences, a lean team, the doorstep pilot

1 lakh

sign-ups in months 4–18: our own retention curve, loan opt-in and approvals, and the cost to win

Months 16–18

12 months of data on the first savers; raise the next round (the seed budget runs to month 24 if it is late)

$8.8M+

the next round in the main case ($9.3M+ in all, less the seed); about $4.6M at 2× ($5.1M in all)

Each fact: one saver's 5-year LTV/CAC either way, from the main case; retention is the Monte Carlo median with still saving pinned at 30%, then 40%. Next round: money needed in all, less the $0.5M seed. The seed plan, a separate document, has the team and the use of funds.

APPENDIX

Inputs, year-by-year tables, the Monte Carlo and the checks behind every number

A1 Inputs: fixed on 24 Oct, drawn, or still unconfirmed (p14) · **A2** Agreed product inputs (p15) · **A3** Costs and team (p16) · **A4** The seed budget (p17) · **A5** Regulatory path (p18) · **A6** The main case, year by year (p19) · **A7** What it takes, the top rung, year by year (not a plan) (p20) · **A8** The Monte Carlo: tables (p21) · **A9** Every assumption tested around the main case (p22) · **A10** Input audit (p23) · **A11** Spreadsheet check (p24) · **A12** What changed on 24 Oct: the bridge and the decisions (p25) · **A13** The upside: the $1B test, on the main case (p26) · **A14** The upside: capturing 10 crore savers, year by year (p27) · **A15** Loan and cross-sell sources (p28) · **A16** Debit route and daily minimum sources (p29)

One case. Every page is the main case: the founders' 24 October inputs, with the two still-uncertain inputs at the median of 1,000 runs of the model. The ladder, the levers and the upside say what would have to be true; none of them is a second plan.

A1 · INPUTS

Every input of the main case: fixed on 24 October, drawn, or still to confirm

INPUT	MAIN CASE	STATUS	SOURCE
Saved a day	₹100 a day, ~20 debit days a month; +5% each year saved	Fixed 24 Oct	Our product's floor. Bachatt's average is unknown; its minimums are lower (₹51 / ₹101 a day; ₹20, liquid fund)
Still saving	35%, then 2.0% stop a month (80% at month 3)	Drawn 30%–40%	Bachatt's 30–40%; drop-off on one line (2.5% at 30%, 1.5% at 40%, 1.0% at 45%); SBI MF's ₹250 daily SIP ~38%
Equity fund fee	0.75% a year on the 80% in equity (returns 10% a year)	Unconfirmed	Active equity funds; not yet in writing
Debt fund fee	0.22% on the 20% in debt (returns 7%): 0.64% blended	Drawn 0.1%–0.35%	Liquid 0.10% to short-duration 0.35%; a hybrid fund at ₹100 a day must pay ~0.64%+
Each daily debit, to us	₹0	Fixed 24 Oct Unconfirmed	BSE StAR MF's exchange SIP (free to distributors) or the fund house's mandate
First personal / business loan	₹70k; repeats 10% bigger a year; top-ups 15% a year at 40%	Fixed 24 Oct	Bachatt's number; our own research had ₹15k–58.5k
Apply for a loan, a year	20% of the users we can reach; no yearly rises	Fixed 24 Oct	Today's market; no source for rises, so none
Loans approved	20% of first applications, 70% of repeats; gold 70%, home and property 45%	Fixed 24 Oct	Founders' market figure: between 11% (an app lender's new applicants) and 25% (our past data)
Home / property loan	₹12 lakh / ₹5 lakh	Fixed 24 Oct	Market: affordable home loans ₹6–15 lakh; small property loans ~₹3.9 lakh
Lender payout	2%, flat on personal and business loans; 0.5–1% on gold, property, home	Fixed 24 Oct	The middle of the market's 1–3%
KYC'd non-savers	about 1.5 a saver, fading within ~3 months: worth 0.06 of a saver (1.06 in all)	Fixed 24 Oct	Lenders rarely approve a user in their first months
Cards; small loans	3% of savers still saving at month 7 take a card (₹1,000): ₹18 a saver won; durable (₹20k) and two-wheeler loans, savers only	Agreed	Card issuers; lender data
Not counted	recharge, bills, FD, NPS (not in the launch app); insurance; loans against savings; fund fees stop when a saver withdraws	Fixed 24 Oct	Founders, 24 Oct; insurance's fixed fee not yet agreed
Cost to win a saver	₹450 at scale + 10% = ₹495; the seed budgets ₹600 and measures it (at ₹600: 0.56× / 0.99×, $12.0M+ needed)	Founders' figure	"Fairly sorted", the founders say; held fixed in the Monte Carlo
Serving	₹5 support a month per saver still saving; ₹4 tech per KYC'd user reached; +10% contingency	Our estimate	The 2 Oct costing
Doorstep	1 in 10 savers; 80% at month 3, 55% at a year	Agreed	Founders (90% online); agreed street input

Fixed: set by the founders (market figures, Bachatt, or our judgement). Drawn: picked at random within its range in each of the 1,000 runs; the main case is the median (A8, page 21). Unconfirmed: in the main case, not yet in writing (page 10). Agreed: A2, page 15. At ₹600: one saver's LTV/CAC at 5 / 8 years and the company's money needed. ₹95 = $1.

A2 · AGREED PRODUCT INPUTS

The agreed product inputs that matter most (ranges agreed 16 Oct), and what the main case does with each

INPUT	LOW	LIKELY	HIGH	UNIT	MAIN CASE	CONFIDENCE
In months 1–6, every take-up as a share of the agreed rate	25%	50%	75%	of the full rate (100% from month 7)	likely	Our judgement
In months 1–6, loan and card approvals as a share of the agreed rate	40%	60%	80%	of the full approval (100% from month 7)	likely	Our judgement
Two-wheeler / e-rickshaw loan: ticket	80,000	1,50,000	6,00,000	₹ a loan	likely	Our judgement
First-loan and card approval rise each calendar year as lenders see our pool's repayments	0%	10%	20%	a year, relative	**none** (24 Oct)	Our judgement
Loan against property: approval share	30%	45%	60%	share of applicants approved	likely	Our judgement
All take-up hazards rise each calendar year as the pool's history grows	0%	5%	15%	a year, relative	**none** (24 Oct)	Our judgement
Growth in the saver's daily amount per year saved	0%	5%	10%	share a year	likely	Our judgement
Bill payments: ticket	12	24	36	bills a year	off: not in the launch app	Our judgement
Shop insurance: our commission	10%	14%	15%	share of first-year premium	not counted: a fixed insurance fee	Published
FD via partner banks: take-up a year	5%	10%	20%	share of active savers, a year	off: not in the launch app	Our judgement
Running cost per active saver a month	0	5	15	₹ a saver a month	likely	Founder-supplied
Term life: take-up a year	1%	3%	6%	of savers without it, a year	not counted: a fixed insurance fee	Our judgement
Digital gold: renews a year	50%	65%	80%	share still buying after a year	off: no digital gold at launch	Our judgement
Two-wheeler insurance: our commission	2.5%	4.75%	9.05%	blended share of premium	not counted: a fixed insurance fee	Published

The inputs that moved the earlier Monte Carlo most. The main case holds each at its likely value unless the founders' 24 October decisions set it to none or switched the product off. The full list of agreed ranges travels with the model.

A3 · COSTS AND TEAM

Costs and team: the seed (months 1–18) and after the round

LINE	SEED (MONTHS 1–18)	AFTER THE ROUND (MONTH 19 ON)
Founders	₹95,000 ($1,000) a month each until month 18	₹1.5 lakh a month each after the round (+10% statutory, +7% a year)
Engineers	1 from month 1 (₹1.1 lakh), 1 junior from month 7 (₹50k)	3 + 1 per 2 lakh active savers, up to 40 (₹1.2 lakh)
Operations and support	1 from month 4 (₹30k)	1 per 20,000 active savers, at least 2 (₹40k)
Product, compliance, growth, finance, risk	Founders, CA and lawyer	1 each, scaling with savers and ad spend
App and tech	₹15 lakh to integrate, ₹1.5 lakh a month	₹1.5 lakh a month + ₹4 per KYC'd user reached
Payments (daily debits)	₹0 a debit in the model; the seed budget (A4) carries ₹2 a weekly debit, to be safe	₹0 a debit through BSE StAR MF or the fund house's mandate, not yet in writing (₹2 a weekly debit: $11.7M+, A9)
Office	Co-working ₹75k a month	₹1.5 lakh + ₹10k a head a month
Compliance	Setup ₹1.25 lakh; ₹10 lakh a year	₹25 lakh a year
Brand, design, fund-raising	Design ₹1 lakh a month in months 1–3; ₹5 lakh to raise the seed	Brand ₹2 lakh a month; ₹15 lakh for the next round
Doorstep agents	₹26,000 a month all-in; 100 sign-ups a month after a 3-month ramp	1 team lead per 10 agents and 1 office per 15, once above 5 agents
Contingency	10% on every cost line (agreed)	10% on every cost line (agreed)
Cash timing	Fund and partner fees arrive 2 months after they are earned (agreed)	Same

Seed numbers are the seed plan's; later rules are our judgement on agreed salary inputs. The 10% contingency also applies to acquisition, so ₹450 to win costs ₹495 in the company model. Tax 25% after losses carried forward; no interest on cash.

A4 · THE $500K

The money builds the product first; 25% is held as contingency

PRODUCT AND TEAM	CUSTOMER ACQUISITION	CONTINGENCY
$240k · 48%	$133k · 27%	$127k · 25%

Product and team · $240k

Salaries: 2 founders + 3 hires	$92k
App: build and running	$54k
Office and fund-raising	$24k
Setup, licences, compliance	$22k
Support, payments and per-user tech	$45k
Design while building	$3.2k

24 months. Salaries $92k, founders at $1,000 a month each.

Customer acquisition · $133k

Online sign-ups	$102k
KYC (identity) checks	$22k
Doorstep pilot, NCR	$8.6k

1 lakh sign-ups in months 4–18; ₹570 per saver won, online and doorstep blended (₹600 online).

Contingency · $127k

Covers the downside. If a sign-up costs ₹200, not ₹100, acquisition costs $235k and the plan still fits in $500k, with about $25k to spare.

Or buys time. If the next round is late, it keeps the lean team and the savers served while the round closes. The company plan raises the next round in month 19, on the facts the seed has measured; it does not count this reserve.

All figures over 24 months, at a planning rate of ₹95 per $. Revenue is not included, so every number is a cost.

A5 · LICENCES AND TIE-UPS

Day one needs no RBI licence; each later step adds one

BEFORE LAUNCH · MONTHS 0-3

Company setup, ₹1.25 lakh
includes AMFI distributor registration (₹40,000 + GST)

NISM exam for both founders
₹1,500 + GST each; renewed every 3 years

BSE StAR MF access
orders and daily SIP mandates; no transaction fee to distributors; ₹0 a debit to us, in writing

3–5 fund houses
empanelled; the ₹100 daily minimum and the fee on the fund we use (0.64% blended or better), in writing

KYC and UPI Autopay partners
e-KYC ₹3–7 a check (₹40 budgeted per KYC with KRA, PAN and bank checks); daily mandates allowed

Data protection
consent flows and data kept in India

AFTER LAUNCH · MONTHS 4-12

Loans as a lender's marketing partner
from month 7: partner lenders pay us a fee per loan (a direct selling agent); RBI digital-lending rules apply (the borrower pays us nothing)

Insurance through a broker partner
from month 7, for a fixed referral fee; our own registration later

Credit cards with issuers
the issuer decides every card

Legal opinions first
lender-offer consent, the insurance fee, agent rules; agents never handle cash

WE WILL NEVER

- ✕ Hold customer money
- ✕ Offer cashback on funds or insurance
- ✕ Run lucky draws or savings circles
- ✕ Use anyone's data without consent

WITH THE NEXT ROUND

Deeper lender partnerships
larger fees on a proven book; first-loss cover only with its own capital (up to 5% of loans, held as cash)

Own NBFC (non-bank lender)
₹10 crore of capital; about 8–14 months or more

Insurance distribution licence
under IRDAI's draft rules, once final

Sources: AMFI, NISM, RBI Digital Lending Directions 2025, RBI NBFC capital norms, IRDAI, Banning of Unregulated Deposit Schemes Act 2019, Digital Personal Data Protection Act 2023.

A6 · THE MAIN CASE

A6 · The main case: 20,000 online savers a month from month 30, year by year

	Y1	Y2	Y3	Y4	Y5	Y6	Y7	Y8
Online savers won	11,664	48,284	2,16,620	2,40,000	2,40,000	2,40,000	2,40,000	2,40,000
Doorstep savers won	1,600	5,083	23,717	27,600	27,600	27,600	27,600	27,600
Active savers (end)	9,910	48,059	1,88,322	2,76,424	3,44,105	3,97,167	4,38,767	4,71,382
Money saved, ₹ Cr (end)	7.70	39.2	229.1	554.1	970.9	1,429.5	1,894.8	2,344.5
Fund fees, ₹ Cr	0.02	0.13	0.81	2.55	4.99	7.85	10.8	13.8
Personal + business loans, ₹ Cr	0.01	0.05	0.27	0.69	1.01	1.29	1.52	1.72
Other lenders' loans, ₹ Cr	0.01	0.06	0.38	0.90	1.29	1.59	1.82	2.01
Cards, ₹ Cr	0.01	0.04	0.27	0.48	0.48	0.48	0.48	0.48
Revenue, ₹ Cr	**0.04**	**0.28**	**1.74**	**4.61**	**7.78**	**11.2**	**14.7**	**18.0**
Acquisition, ₹ Cr	0.76	2.53	10.8	11.9	11.9	11.9	11.9	11.9
Team, ₹ Cr	0.42	1.06	2.15	2.79	3.24	3.66	4.30	4.75
Other costs, ₹ Cr	0.85	1.52	3.98	5.61	6.63	7.44	8.11	8.62
EBITDA, ₹ Cr	**−1.98**	**−4.83**	**−15.2**	**−15.7**	**−14.0**	**−11.8**	**−9.65**	**−7.28**
Cumulative EBITDA, ₹ Cr	−1.98	−6.81	−22.0	−37.7	−51.7	−63.5	−73.1	−80.4
PAT, ₹ Cr	−1.98	−4.83	−15.2	−15.7	−14.0	−11.8	−9.65	−7.28
Heads (end)	5	13	20	25	29	31	34	36
Doorstep agents (end)	2	12	23	23	23	23	23	23

Main case: the founders' 24 October inputs; still saving at 12 months 35% and the debt fund's fee 0.22%, the Monte Carlo median. Money saved: savers' fund balance at year end. Other lenders' loans: gold, property, home, durable and vehicle loans; insurance is not counted. PAT: profit after tax (equal to EBITDA while past losses absorb the tax). Other costs include the 10% contingency. Undiscounted.

A7 · THE TOP RUNG (3.20×), EVERY UPSIDE LEVER AT ONCE

A7 · The top rung (3.20×), every upside lever at once: what it takes, not a plan

	Y1	Y2	Y3	Y4	Y5	Y6	Y7	Y8
Online savers won	11,664	48,284	2,16,620	2,40,000	2,40,000	2,40,000	2,40,000	2,40,000
Doorstep savers won	1,600	5,083	23,717	27,600	27,600	27,600	27,600	27,600
Active savers (end)	10,241	50,181	2,03,730	3,20,223	4,21,980	5,12,176	5,92,125	6,62,990
Money saved, ₹ Cr (end)	16.3	89.6	537.8	1,421.7	2,694.8	4,271.8	6,076.5	8,045.8
Fund fees, ₹ Cr	0.03	0.29	1.87	6.33	13.4	22.7	33.7	46.0
Personal + business loans, ₹ Cr	0.02	0.16	1.10	3.29	5.80	7.67	9.51	11.2
Other lenders' loans, ₹ Cr	0.02	0.12	0.77	2.16	3.69	4.81	5.79	6.65
Cards, ₹ Cr	0.01	0.06	0.39	0.80	0.93	0.93	0.93	0.93
Revenue, ₹ Cr	**0.08**	**0.62**	**4.13**	**12.6**	**23.9**	**36.2**	**50.0**	**64.8**
Acquisition, ₹ Cr	0.76	2.53	10.8	11.9	11.9	11.9	11.9	11.9
Team, ₹ Cr	0.42	1.06	2.19	2.90	3.48	4.24	5.05	5.91
Other costs, ₹ Cr	0.85	1.54	4.08	6.01	7.46	8.77	9.94	11.0
EBITDA, ₹ Cr	**−1.94**	**−4.52**	**−12.9**	**−8.25**	**1.00**	**11.2**	**23.1**	**35.9**
Cumulative EBITDA, ₹ Cr	−1.94	−6.46	−19.4	−27.6	−26.6	−15.4	7.69	43.6
PAT, ₹ Cr	−1.94	−4.52	−12.9	−8.25	1.00	11.2	21.1	27.0
Heads (end)	5	13	22	28	34	39	43	48
Doorstep agents (end)	2	12	23	23	23	23	23	23

All five upside levers at once: ₹200 a day, 45% still saving (1.0% a month after), applying 35%, approval 30%, take-up +5% and approval +10% a year (our old loan targets): EBITDA positive from month 54 on $3.9M (page 8). Money saved: savers' fund balance at year end. Other lenders' loans: gold, property, home, durable and vehicle loans; insurance is not counted. PAT: profit after tax (equal to EBITDA while past losses absorb the tax). Other costs include the 10% contingency. Undiscounted.

A8 · THE MONTE CARLO

1,000 runs of the model on the value of a saver: the results, and what pinning each still-uncertain input is worth

ACROSS THE 1,000 RUNS	P10	P50 (MEDIAN)	P90
LTV/CAC, 5 years	0.60×	0.75×	0.93×
LTV/CAC, 8 years	1.00×	1.32×	1.76×
Saver pays back	month 64	month 75	after month 96
Company EBITDA positive from	after month 96	after month 96	after month 96
Money needed in all	$8.8M+	$9.3M+	$9.8M+
Year 5 EBITDA	−₹14 Cr	−₹14 Cr	−₹13 Cr
Cumulative EBITDA, 5 years	−₹52 Cr	−₹52 Cr	−₹51 Cr
Cumulative EBITDA, 8 years	−₹85 Cr	−₹80 Cr	−₹75 Cr

SHARE OF THE 1,000 RUNS (ALL ELSE AT THE MAIN CASE)	
LTV/CAC at least 1× in 5 years	0.3%
At least 2× / 3× in 5 years	0% / 0%
LTV/CAC at least 1× in 8 years	90%
The saver pays back by month 96	89%
Company EBITDA positive by month 96	0%
Cumulative EBITDA positive by month 96	0%

WHAT PINNING EACH INPUT IS WORTH: THE MEDIAN, 5 YEARS

IF THE FACTS FIND…	LOW END	MEDIAN	HIGH END	MEDIAN	RANK CORR.
Still saving at 12 months	30%	0.57×	40%	0.98×	0.99
The debt fund's fee	0.1%	0.72×	0.35%	0.79×	0.14

THE RUNS BY STILL SAVING AT 12 MONTHS: MEDIANS

STILL SAVING	RUNS	5 YEARS	8 YEARS	SAVER PAYS BACK	MONEY NEEDED
30–32%	200	0.60×	1.00×	after month 96	$9.8M+
32–34%	200	0.68×	1.16×	month 84	$9.6M+
34–36%	200	0.75×	1.32×	month 75	$9.3M+
36–38%	200	0.84×	1.54×	month 68	$9.1M+
38–40%	200	0.93×	1.76×	month 64	$8.8M+

The Monte Carlo: we ran the model 1,000 times, picking still saving at 12 months (30%–40%, the drop-off after a year 2.5% to 1.5%) and the debt fund's fee (0.1%–0.35%) at random within their ranges; everything else is fixed by the founders, the cost to win at ₹495. Median (P50): the middle run; P10 / P90: the 10th and 90th percentiles, so 8 in 10 runs fall between them (each measure on its own). Company at 20,000 online savers a month; +: the cash hole is still deepening at month 96. Rank corr.: how closely the input moves LTV/CAC (1 = fully).

A9 · EVERY ASSUMPTION TESTED

Every assumption tested, one at a time: only ₹300 a day, credit-hungry savers, ₹200 a day, our old loan targets or 45% still saving bring profit by month 96

ASSUMPTION CHANGED	ONE SAVER, 5 YEARS	EBITDA POSITIVE	MONEY NEEDED	Y5 EBITDA ₹ CR	Y8 EBITDA ₹ CR	ACTIVE SAVERS, MONTH 60 (LAKH)
The main case	**0.75×**	**not by month 96**	**$9.3M+**	**−14.0**	**−7.30**	**3.4**
24% still saving, like savings apps (then 2.5% a month)	0.45×	not by month 96	$10.2M+	−14.9	−10.9	2.5
45% still saving (then 1.0% a month drop off)	1.26×	month 90	$7.8M	−12.7	0.10	4.2
₹200 a day	1.59×	month 76	$5.9M	−9.00	6.50	3.4
₹300 a day	2.44×	month 61	$4.6M	−4.00	20.3	3.4
10% apply for a loan a year	0.64×	not by month 96	$10.0M+	−15.0	−8.90	3.4
50% apply for a loan a year	1.10×	not by month 96	$7.3M+	−10.9	−2.00	3.4
KYC'd non-savers stay as long as savers	0.80×	not by month 96	$9.3M+	−13.8	−6.60	3.4
Credit-hungry: 45% still saving (then 1.0% a month) and 50% applying	1.78×	month 75	$5.9M	−8.80	8.00	4.2
Loans at our old targets: applying 35%, approval 30%, yearly rises	1.12×	month 85	$6.0M	−8.40	1.60	3.4
We pay ₹2 for each weekly debit	0.39×	not by month 96	$11.7M+	−17.6	−12.5	3.4
Equity fund fee 0.5%, not 0.75%	0.49×	not by month 96	$10.6M+	−15.6	−11.6	3.4
₹300 to win a saver	1.12×	not by month 96	$6.8M+	−10.1	−3.30	3.4
₹600 to win a saver (our funnel today)	0.56×	not by month 96	$12.0M+	−18.2	−11.5	3.4
Debt funds only, no equity	0.20×	not by month 96	$12.0M+	−17.2	−16.3	3.4
Online only after month 18 (no doorstep)	-	not by month 96	$8.9M+	−13.2	−7.40	3.0

One change at a time on the main case (first row); the company at 20,000 online savers a month from month 30. One saver, 5 years: the online saver's LTV/CAC with the same change (–: the change is to the company only). Money needed: the seed + the deepest cash hole (fees arrive 2 months late) + a ₹5 crore cash buffer, at ₹95 = $1; +: EBITDA is still negative at month 96, so at least that (run on, the main case's hole bottoms around year 12 at about $10.6M).

A10 · INPUT AUDIT

All 75 inputs were checked against their sources on 22 Oct; on 24 Oct the founders replaced the hopeful ones with market figures

17
match their source

21
our judgement, labelled as such

23
partly supported by their source

7
were targets: the loan funnel and the cost to win

7
wrong or unsourced: fixed or flagged below

WHAT THE AUDIT FOUND, AND WHAT THE MAIN CASE DOES NOW

FINDING	THE MAIN CASE
The loan funnel (applying 35%, the loan sizes, offers to every KYC'd sign-up, payout rising to 3%) was labelled as evidence	Replaced on 24 Oct by today's market: 20% apply, 20% approved, no yearly rises, 2%, flat, ₹70k first loans; our old targets appear only as the upside of what it takes
No payment cost on debits; tech ₹1 a saver a month	₹4 tech for every KYC'd user reached; debits ₹0 through BSE StAR MF or the fund house (unconfirmed in writing), ₹2 a weekly debit tested (A9)
Insurance counted 75% of a broker's commission; the Choti SIP incentive and digital gold were counted	Insurance: a fixed referral fee, not counted until agreed; Choti, digital gold, recharge, bills, FD and NPS off
Cost to win in the seed was ₹550; the seed's own funnel gives ₹600 an online saver	₹450 at scale (the founders' figure), held fixed; the seed budgets ₹600 and measures it
The agreed 10% contingency on every cost line was missing	Added, inside EBITDA and on the LTV's cost to win (₹495)
The agreed 2-month delay before fees arrive in cash was missing	Added to cash and money needed
Compliance of ₹25 lakh a year after the seed is not an agreed input	Kept; A3 marks post-round costs as our judgement
Loan against property take-up (0.5%) and size had no source	Take-up rebuilt 21 Oct from lender data (3% of loan applicants, 1% payout); size ₹5 lakh, today's market (24 Oct)

An independent reviewer read each source row; the full 75-row table travels with the model. The 24 October decisions: A1, page 14 and A12, page 25.

A11 · SPREADSHEET CHECK

The spreadsheet and the model give the same answers on the main case

138 of 138
checks within target

0.13%
largest revenue gap, any year, any case

18 of 18
cases with the same profit month

THE SHEET NEXT TO THE MODEL

MEASURE	MAIN CASE, 20,000 A MONTH: SHEET	… MODEL	1,50,000 A MONTH: SHEET	… MODEL
Revenue, year 5 (₹ Cr)	7.77	7.77	55.5	55.5
EBITDA, year 5 (₹ Cr)	−14.0	−14.0	−88.1	−88.1
Revenue, year 8 (₹ Cr)	18.0	18.0	132.0	132.0
EBITDA, year 8 (₹ Cr)	−7.30	−7.30	−35.7	−35.7
EBITDA positive from	not by month 96	not by month 96	not by month 96	not by month 96
Money needed (₹ Cr; $9.3M+ at 20,000)	88.7	88.7	493.9	493.9
Active savers, month 60	3,43,952	3,43,952	25,31,383	25,31,383
Money saved, month 60 (₹ Cr)	970.2	970.2	6,898.1	6,898.1

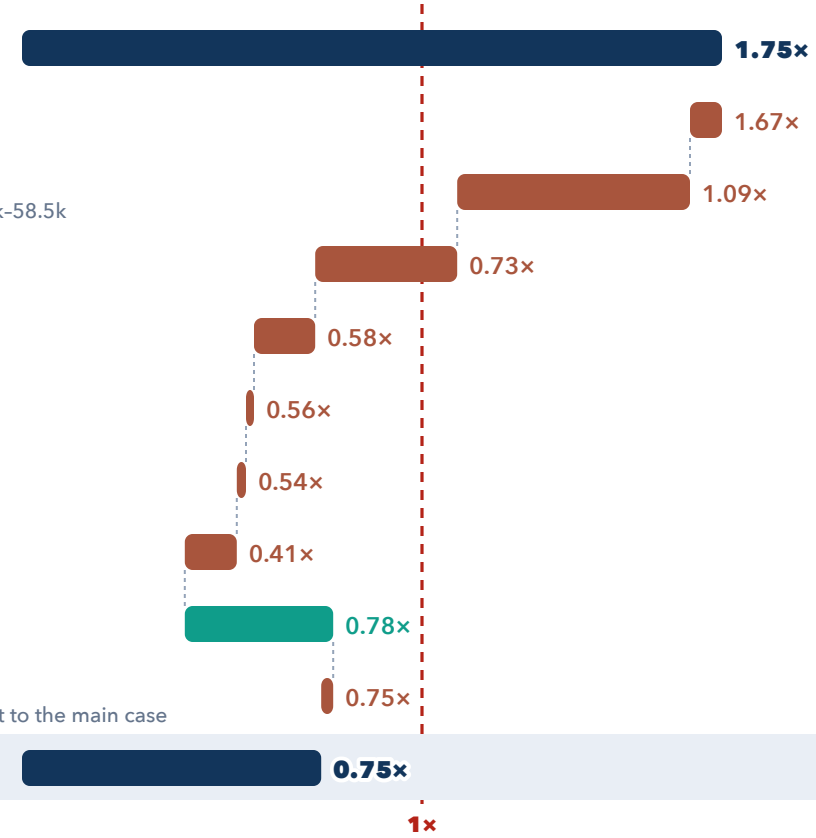

Both plans (20,000 and 1,50,000 online savers a month): revenue and EBITDA in every year 1–8, profit month, money needed, active savers and money saved at month 60. Each of the 15 assumption changes of A9: years 5 and 8 and the profit month. Every formula of the sheet's v4 tabs was evaluated on the founders' 24 October inputs and compared with the model.

A12 · WHAT CHANGED ON 24 OCTOBER

From the 23 October 1.75× to 0.75× today: the ₹70k loan and market apply and approval did most of it (−0.94), and ₹0 debits, still to confirm, won back +0.37

THE DECISION: WAS (23 OCT) → NOW (24 OCT)	CHANGE
Last week's main case (23 Oct) 8 years 2.75×; pays back in month 39	**1.75×**
Serving carries our 10% contingency a correction: the cost of serving a saver now carries the 10% contingency, as the company model always did	**−0.08** 8y −0.09
Personal and business loans: Bachatt's size ₹1.7 lakh (drawn ₹50k–3 lakh) → ₹70k first loans, repeats 10% bigger a year plus top-ups · Bachatt's number; our research had ₹15k–58.5k	**−0.58** 8y −0.80
Apply and approval at today's market apply 27% → 20% a year; first loans approved 25% → 20%; yearly rises 2.4% / 4.8% → none	**−0.36** 8y −0.49
Home and property loans at market sizes home ₹20.6 lakh → ₹12 lakh; property ₹14.6 lakh → ₹5 lakh	**−0.15** 8y −0.18
Lender payout flat 2%, rising 24% by year 5 → 2% flat · the middle of the market's 1–3%	**−0.02** 8y −0.04
KYC'd non-savers fade 1.72 reached per saver, kept as long as savers → fade within ~3 months: 1.06 reached	**−0.02** 8y −0.03
Products not in the launch app recharge, bills, FD and NPS: on → off	**−0.13** 8y −0.19
Debits at ₹0 to us (to confirm) ₹2 a weekly debit → ₹0 through BSE StAR MF or the fund house's mandate · not yet in writing	**+0.37** 8y +0.44
Still saving at 12 months: Bachatt's range 36% → Bachatt's 30–40%, drawn (median 35%), the drop-off after a year moving with it; the debt fund's fee and repeat approval set to the main case	**−0.03** 8y −0.05
The main case (24 Oct) 8 years 1.32×; pays back in month 75	**0.75×**

ONE SAVER'S LTV/CAC, 5 YEARS

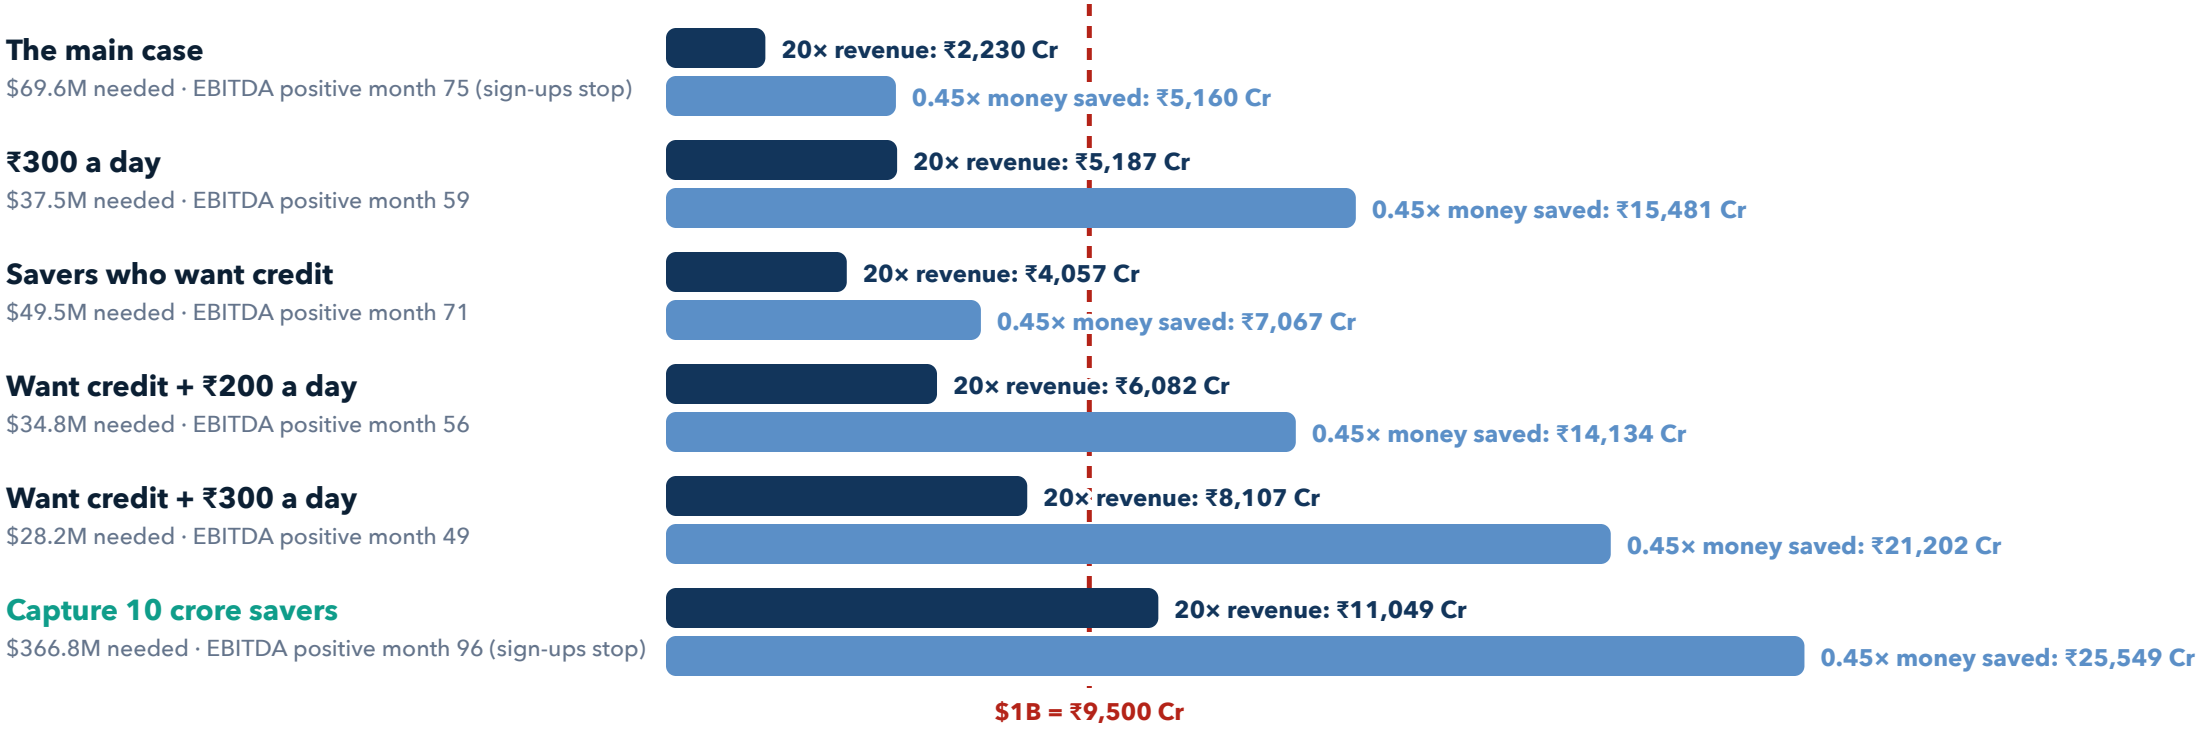

One decision at a time, in this order, each on top of the last (a different order moves the sizes a little). Unchanged on 24 October: the equity fund fee 0.75% (active funds, still to confirm in writing), ₹100 a day (our product's floor) and the cost to win ₹495 (the founders' figure, with our 10% contingency), held throughout.

A13 · THE UPSIDE: THE $1B TEST, ON THE MAIN CASE

At 2.5 lakh savers a month no case reaches $1B on both yardsticks by year 5; only capturing 10 crore savers does, for $367M and a third of the segment

VALUE AT MONTH 60, ₹ CRORE, ON THE MAIN CASE: FIVE CASES AT 2.5 LAKH ONLINE SAVERS A MONTH, AND THE 10-CRORE PATH

Not the plan. Five cases at 2.5 lakh online savers a month from month 30 (the closest falls 15% short on revenue); sign-ups stop at 20% of a 7 crore pool in month 75, so profit there is acquisition stopping, not the business. The 10-crore path wins 12.4 lakh online savers a month, so about 1 in 3 of a 30 crore segment must start saving (1 in 5 sign-ups do today); its EBITDA turns positive only as sign-ups stop at month 96, and year 8 is −₹141 Cr. Yardsticks: 20× the month-60 revenue run-rate; 0.45× money saved.

A14 · THE UPSIDE, NOT THE PLAN

A14 · The upside, not the plan: 10 crore savers on the main case, year by year

	Y1	Y2	Y3	Y4	Y5	Y6	Y7	Y8
Online savers won	11,664	21,87,754	1,33,59,076	1,49,10,648	1,49,10,648	1,49,10,648	1,49,10,648	1,47,98,915
Doorstep savers won	1,600	1,82,567	14,08,133	16,57,200	16,57,200	16,57,200	16,57,200	16,44,800
Active savers (end)	9,910	21,04,814	1,10,73,944	1,66,50,728	2,09,31,030	2,42,86,812	2,69,17,766	2,88,56,316
Money saved, ₹ Cr (end)	7.70	851.3	11,703.4	31,241.6	56,775.8	85,115.5	1,14,009.6	1,42,013.7
Fund fees, ₹ Cr	0.02	1.10	36.9	139.7	288.3	464.1	649.7	833.5
Personal + business loans, ₹ Cr	0.01	0.65	14.2	40.1	60.9	78.4	93.0	105.1
Other lenders' loans, ₹ Cr	0.01	1.05	20.2	52.8	77.5	96.7	111.6	123.2
Cards, ₹ Cr	0.01	0.89	16.0	29.5	29.9	29.9	29.9	29.9
Revenue, ₹ Cr	**0.04**	**3.69**	**87.4**	**262.1**	**456.7**	**669.1**	**884.2**	**1,091.7**
Acquisition, ₹ Cr	0.76	108.7	658.6	734.3	734.3	734.3	734.3	728.8
Team, ₹ Cr	0.42	4.09	35.7	49.0	55.2	61.4	67.7	73.9
Other costs, ₹ Cr	0.85	18.6	162.0	259.7	318.9	365.4	401.9	430.1
EBITDA, ₹ Cr	**−1.98**	**−127.7**	**−768.9**	**−780.9**	**−651.7**	**−491.9**	**−319.6**	**−141.0**
Cumulative EBITDA, ₹ Cr	−1.98	−129.7	−898.6	−1,679.4	−2,331.1	−2,823.0	−3,142.6	−3,283.6
PAT, ₹ Cr	−1.98	−127.7	−768.9	−780.9	−651.7	−491.9	−319.6	−141.0
Heads (end)	5	159	535	551	563	574	581	582
Doorstep agents (end)	2	692	1,381	1,381	1,381	1,381	1,381	1,257

The 10-crore path (A13): 12.4 lakh online savers won a month from month 30, each the main case's saver; a third of a 30 crore segment by month 96. EBITDA turns positive only in month 96, as sign-ups stop; year 8 as a whole is still −₹141 Cr; money needed $367M. Money saved: savers' fund balance at year end. Other lenders' loans: gold, property, home, durable and vehicle loans; insurance is not counted. PAT: profit after tax (equal to EBITDA while past losses absorb the tax). Other costs include the 10% contingency. Undiscounted.

A15 · LOAN AND CROSS-SELL SOURCES

Where the loan funnel's benchmarks come from (researched 21 Oct 2026)

MEASURE	VALUE	SOURCE	AS OF
Referral payout: personal loans	1–2.5% (up to 3%)	Loan-agent platforms (Ruloans / GroMo /…	2026
Referral payout: business loans	1–2.5% (up to 2.75%)	Loan-agent platforms	2026
Referral payout: home loans	0.25–0.75% (to 1%)	Loan-agent platforms	2026

Referral payouts: loan-agent platforms' own pages (direct selling agents, the lenders' referral partners), indicative. Take rates: our division of reported revenue by disbursals. The founders set the 24 October loan inputs from these (A1, page 14).

A16 · DEBIT ROUTE SOURCES

Why the main case puts debits at ₹0 and ₹100 a day into one hybrid fund, and why both still need confirming in writing

WHAT	WHAT THE SOURCE SAYS	SOURCE	DATE
Exchange SIP (XSIP) on BSE StAR MF: cost to the distributor	Free of charge to distributors; several SIPs, for any fund house, can run under one mandate	BSE	live page, read 2026-10-24
Who pays BSE for StAR MF orders	Since 2018 fund houses pay BSE per transaction (26 of 37 agreed); no current fee schedule is public	Moneylife	2018-04
Daily SIPs through BSE StAR MF in practice	A broker's help page: a daily exchange SIP exists; it cannot be paused, only cancelled	IIFL help	live page, read 2026-10-24
Daily SIP minimum per scheme	About ₹100 at most fund houses (₹500 at one, ₹10 at a passive fund); so ₹80 + ₹20 a day likely becomes one hybrid fund	Muthoot Securities (Wealth Company notice)	2026-01-16
UPI payment fee on one-time fund purchases, from 15 Oct 2026	0.02% (capped at ₹300) on lump sums, borne by the industry; recurring Autopay SIP debits carry none	Cafemutual	2026-09-15
Bachatt's app listings (a benchmark)	Daily saving from ₹51 or ₹101 a day (listings conflict); a liquid fund from ₹20 a day; UPI Autopay; personal loans	Apple App Store	2026

Still open, asked in writing: whether BSE StAR MF or the fund houses accept a ₹100 daily SIP through the exchange at ₹0 to us, and each fund house's distributor fee on its active equity funds. ₹0 to us holds only on the exchange route or the fund house's own mandate; a payment company of our own would charge its list price.

Researched 24 October 2026. A ₹2 weekly debit would take one saver to 0.39× and the company to $11.7M+ needed (A9, page 22).
