Bachatt today: entry is clear, the future is contested

Memo for Piyush · From Sandeep · 19 October 2026 · Should we launch a challenger, and where do we fight?

Bachatt Model

Acquisition + Retention + Servicing

✓ Built / live
✗ Vision / not built

ACQUISITION	RETENTION	SERVICING
✓ Savings product through debt funds	✓ Financial products (MF, Insta Fund, Gold/Silver)	✗ ① AI financial planning
✓ Online acquisition	✗ Wallet-like: save in / withdraw out	✓ ② Lean DSA + digital
✗ Offline acquisition†	✓ Daily / flexible SIP for irregular incomes	✓ ③ Loans on book*
✓ Low-ticket entry (~₹250)	✓ No lock-in, instant withdraw	✗ ④ 3-month EMI + gold loan
✓ → Digital loans through DSA		

Vision → go-to financial planning app / wallet (save in, withdraw out, finance purchases)

Power move: own the customer relationship + money flows → EMI on products deepens habit and data

* Bachatt's site says partner NBFCs disburse its loans (XL-12, XB-15), so "loans on book" needs verifying. † Since this slide: Bachatt's growth head says a 40–50 person NCR street team signs ~5,000 customers a month (PR-02).

✓ ENTRY IS CLEAR
Every ✓ square can be copied: table stakes, not a moat

→

✗ FUTURE IS CONTESTED
Wallet, AI, EMI, gold loans, loans on book: where the value is won

→

★ OUR ENTRY
Online-first to match; ~20% offline to test the contested squares

HOW WE'D ENTER: ONLINE-FIRST, WITH OFFLINE AS A TEST

ONLINE CORE · ~80% of savers
App + UPI daily SIP + digital loans: matches every ✓ square

OFFLINE TEST
~20% of savers

ONLINE: match, then out-credit
Parity with Bachatt's ✓ squares in 6–9 months
Edge: credit from the daily savings record

OFFLINE: try it and find out
Does a person lift retention, reach, gold loans?
Month 6: grow, hold or drop the arm

Recommendation: launch **online-first** and match the ✓ squares in 6–9 months. Compete where Bachatt is thin: **committed savers in one segment**, and **credit priced from their savings record**. Run **~20% offline** as a test arm; 6 months of data decide whether it grows.

What we found, in five numbers

FIVE NUMBERS THAT SHAPE THE CALL

₹167–500

invested per Bachatt user (₹50 Cr ÷ 30 lakh or 10 lakh users; two company claims)

At a 0.35% trail that earns ₹0.6–₹1.8 a year. Savings is the hook; credit is the business.

BAC-02, XB-03, XB-12, XB-04

36%

of SBI's ₹250 daily SIPs started in FY26 had stopped by year-end

Small savers are easy to sign and hard to keep: Chhoti SIPs close ~7 for every 10 opened.

NG-033, NG-034

26%

of savers must take a DSA loan to repay a ₹300 acquisition (Bachatt's own cost)

Paytm's merchants sit at ≈5%. Sharing loan risk cuts the bar to 11%; an LSP's to ~6%.

XL-13, XL-29, SE-05, LEV-061, XB-06 (derived); ₹300 a customer: Bachatt's growth head (PR-02)

2% vs 9%

bad loans: SHGs that save before borrowing vs microfinance

Saving may predict repayment, but it's correlational; a US trial found no average effect.

EVD-03 (2.05% vs 8.72%), EVD-01

₹10/day

PhonePe Daily Savings, built with Jar (October 2024)

The UPI giants already sell the ground floor; a challenger wins on depth, not reach.

SAV-08, JAR-06/07 (Jar: 35M registered, profitable)

The race is not to sign the most savers. It is to keep committed savers, and to prove their saving predicts repayment before anyone else does.

1 · Entry is clear: anyone can build the ground floor

THE CONTESTED FLOORS: value is won here

- ✗ Offline acquisition
- ✗ Wallet: save in / out
- ✗ AI financial planning
- ✗ 3-month EMI + gold loan
- ✗ Loans on book*

THE GROUND FLOOR: Bachatt's ✓ squares, which anyone can build

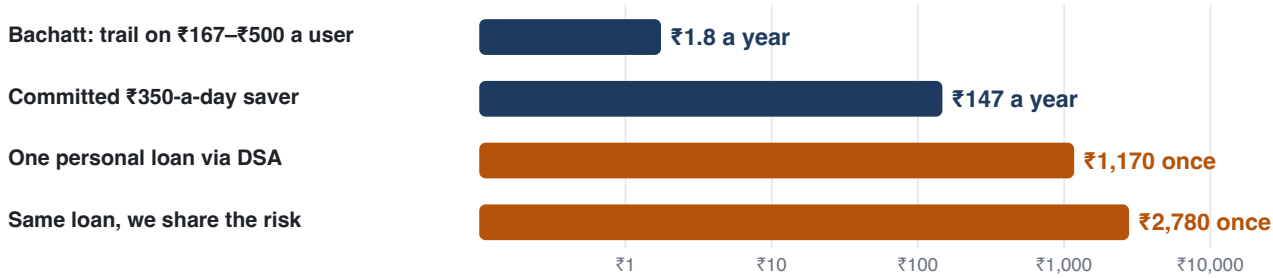

✓ Debt-fund savings	✓ Online acquisition	✓ Low ticket, daily SIP	✓ Fund shelf	✓ Instant withdraw	✓ DSA loans
ARN ₹40k (REG-036)	≈₹300 per saver*	UPI auto-debit	MF, Insta, gold funds	≤ ₹50k a day (REG-041)	1–3% fee (XL-13)

≈ 6–9 months to match

* Bachatt's growth head: ~₹300 to win a customer, online or street (PR-02); Bachatt's 'loans on book' is unverified (PR-02)

Copying Bachatt's ✓ squares gets us parity at best. The market will be won on the contested floors.

WHY THE UPPER FLOORS MATTER: WHAT ONE USER IS WORTH (₹, LOG SCALE)

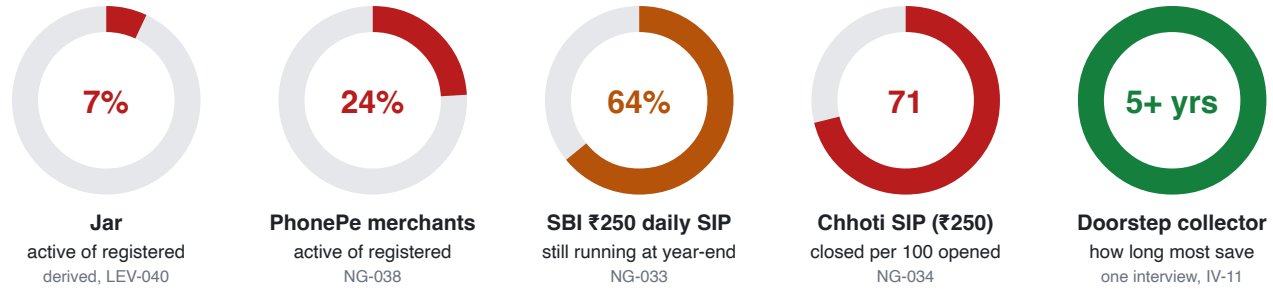

Sources: BAC-02/04, XB-04 (trail 0.2–0.5%), XL-13, XL-29 (₹58,522 average loan), SE-05/XB-07 (4.5–5%). The ₹350-a-day saver is our illustration.

Savings trail is under ₹2 a user a year at Bachatt's visible balances (₹167–₹500 a user). One loan is worth more than years of trail.

2 · Savings is the hook, not the business

THE LEAK: SMALL SAVERS ARE EASY TO SIGN, HARD TO KEEP

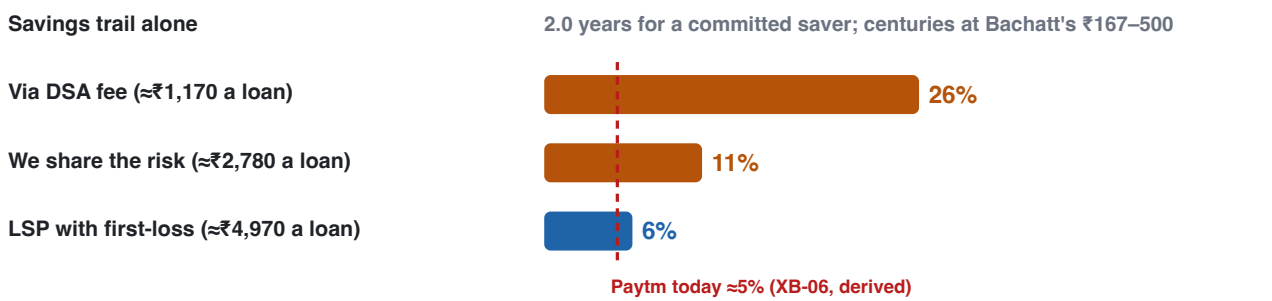

10–30 lakh users × ₹167–500
what Bachatt reports

if Bachatt looks like Jar (~7% active)

≈0.7–2.1 lakh savers × ≈₹2,400–₹7,100
a small, deeper core (our read; NG-032: no active count)

Small-ticket savers leave apps and SIPs fast; the one doorstep collector we spoke to keeps most for 5+ years. Bachatt's 10–30 lakh are sign-ups: it publishes no active count.

WHO PAYS FOR A ₹300 SAVER? SHARE OF SAVERS WHO MUST BORROW ONCE TO REPAY IT

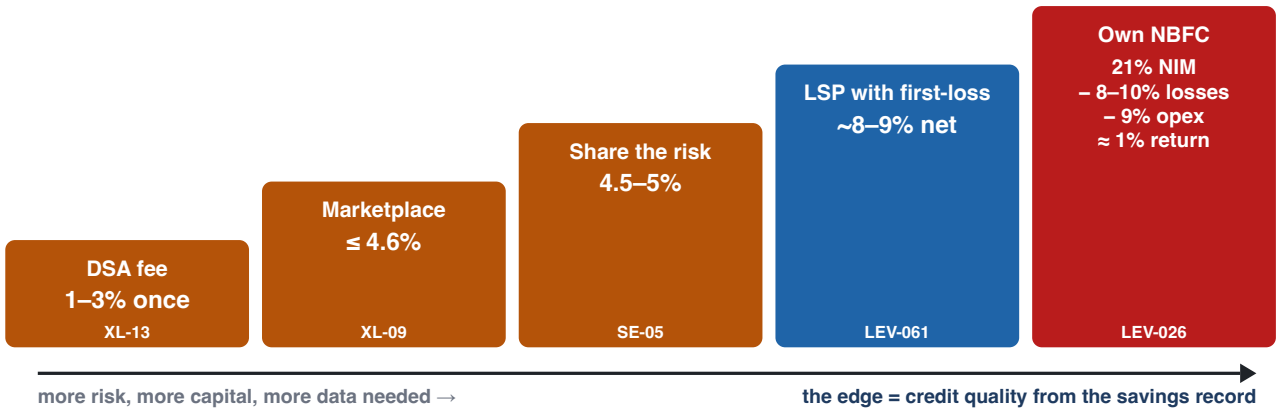

And it must happen early: a third of small-ticket savers stop within the year (NG-033). Sources: XL-29, XL-13, SE-05, LEV-061; ₹300 is Bachatt's own cost (PR-02).

Savings can't repay what a saver costs to win. Whoever wins has to climb the credit ladder, with savers who stay long enough to borrow.

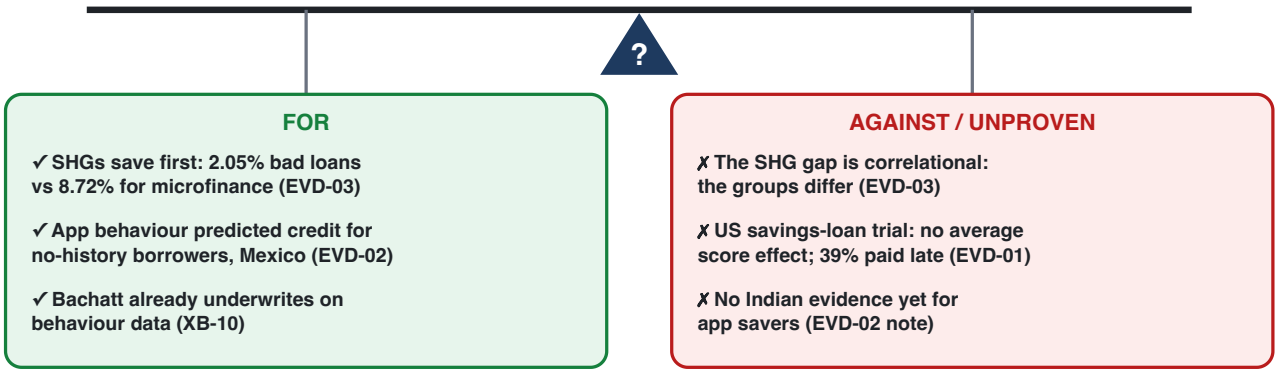

3 · The money is in credit; the edge is the signal

THE CREDIT STAIRCASE: EACH STEP EARNS MORE, AND CARRIES MORE RISK

A licence alone doesn't make an NBFC profitable: fintech NBFCs keep about 1% after losses. Credit quality decides it.

DOES SAVING PREDICT REPAYMENT? THE BET EVERYONE IN THIS SPACE IS MAKING

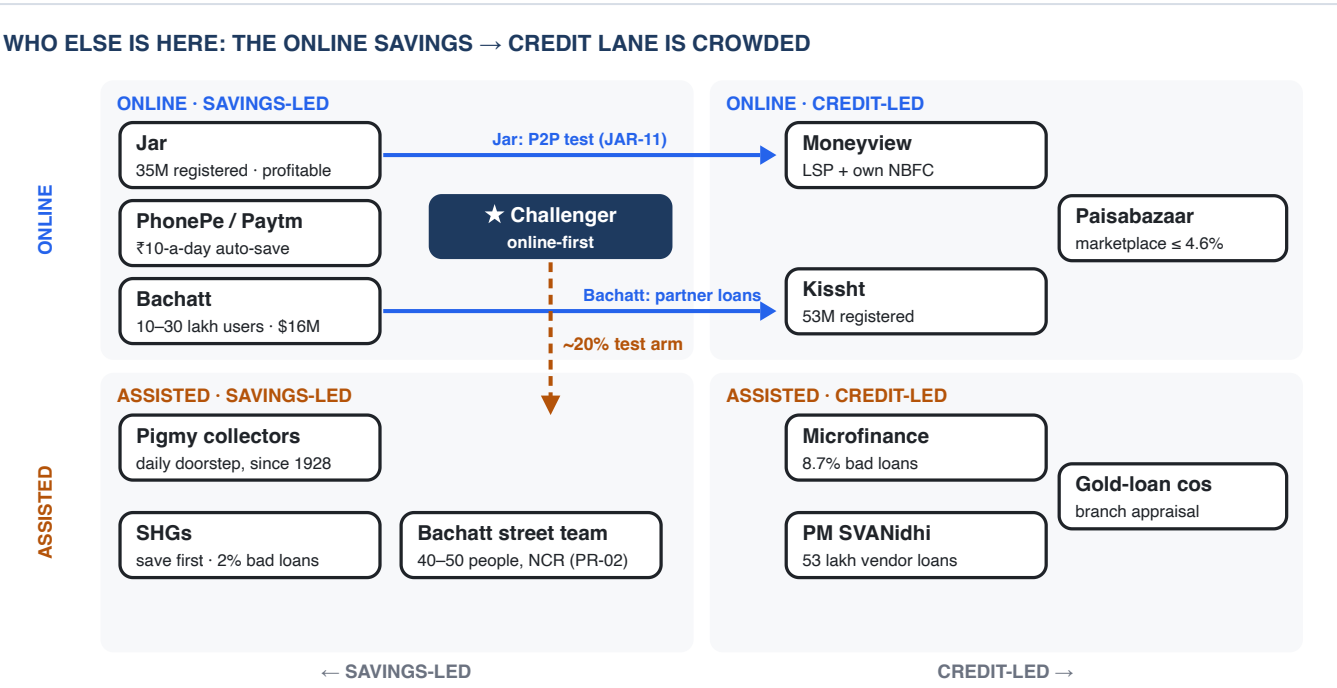

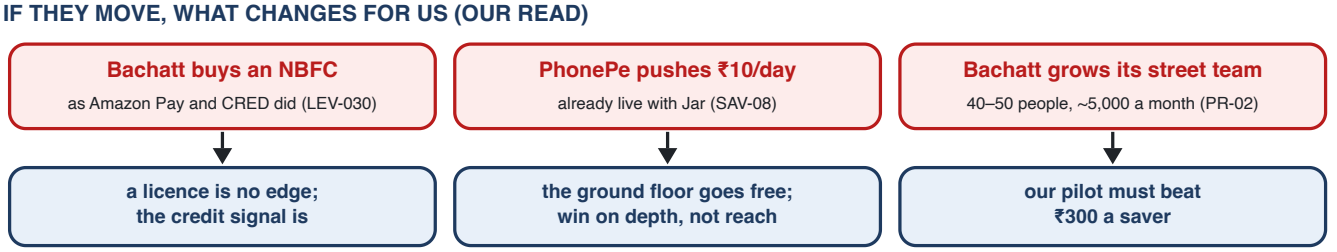

Why it matters: 55% of new small-business borrowers are new to credit (NG-042); self-employed unsecured loans peak at 10–11% bad (NG-015). A signal that works is worth a lot.

Plausible, not proven: the pilot's first test

If saving predicts repayment, the player with deeper savers wins on credit. If it doesn't, this is a thin-fee lead business. Test it first.

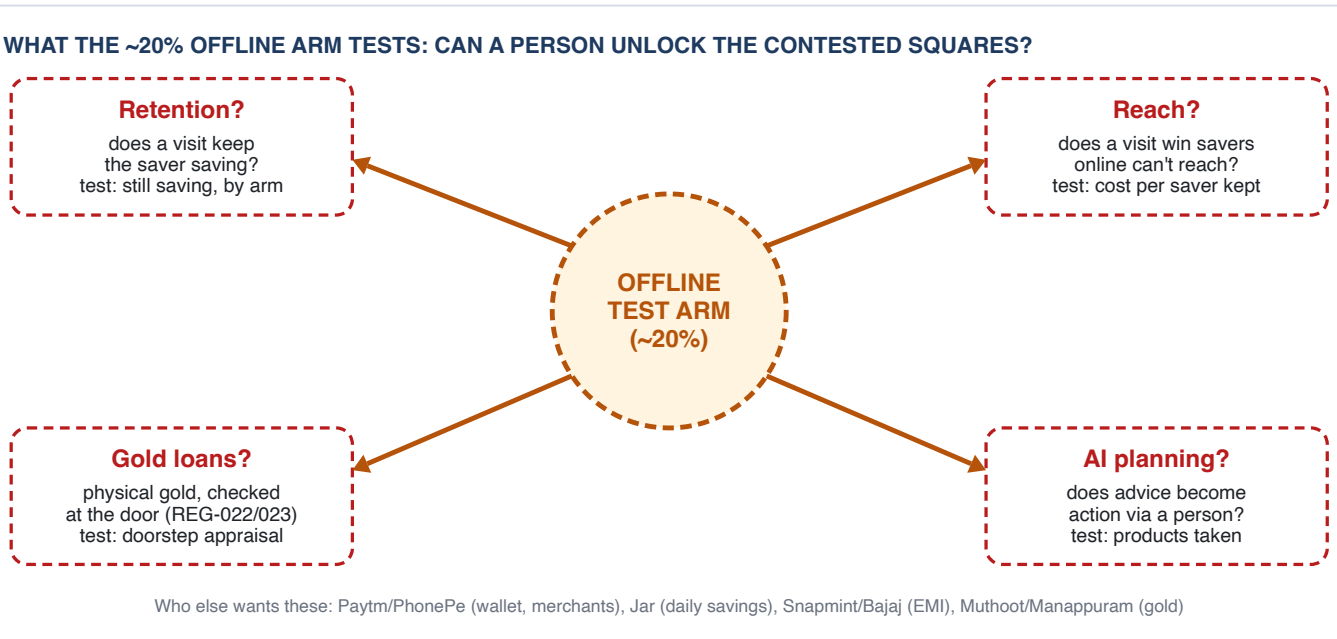

4 · Who else is here, and what they might do

We can't out-reach PhonePe or out-spend Jar. Our room is depth: committed savers in one segment, and credit priced from their savings record.

5 · Offline is a 20% test, not the bet

Who else wants these: Paytm/PhonePe (wallet, merchants), Jar (daily savings), Snapmint/Bajaj (EMI), Muthoot/Manappuram (gold)

WHY OFFLINE IS A TEST: A DOORSTEP VISIT COSTS ~14× WHAT THE FUND PAYS

A co-op bank can pay its collectors because it LENDS the deposits; a fund distributor earns only the trail. So the offline arm must pay its way through credit, or cost far less per visit. That is what the 20% tests.

Sources: NG-041 (commission capped at 2.5%, was 3–4%), XB-04. One co-op collector we spoke to: 200–400 savers, ₹200–500 a day, most saving 5+ years, salary ₹15–25k + under 2% (IV-01/03/11/13). The ₹350-a-day saver is our illustration.

Bachatt already runs a street team in NCR. Our test asks whether a visit keeps savers saving, not only signs them up, and grows only where it pays.

6 · The challenger's slide: same map, different ground

Challenger model

Same three columns · online-first, with a ~20% offline test

✓ Built / live
✗ Vision / not built

ACQUISITION	RETENTION	SERVICING
✓ Debt-fund savings (match) TABLE STAKES	✓ Same fund shelf (no digital gold) TABLE STAKES	✓ Lean DSA + digital (match) TABLE STAKES
✓ Online-first: app + UPI daily SIP TABLE STAKES	✓ Habit: app nudges; agent visits OFFLINE TEST	✓ AI planning in the app CONTESTED
✓ ~20% offline agents, 1 city OFFLINE TEST	✓ Save in / out on fund rails CONTESTED	✓ Credit from the savings record OUR EDGE
✓ Loans: partner → risk-share → own book CONTESTED	✓ Never hold money TABLE STAKES	✓ Gold loans: doorstep appraisal OFFLINE TEST

Vision → the daily money partner for cash earners: save, withdraw, borrow, protect; online first, a person where it pays

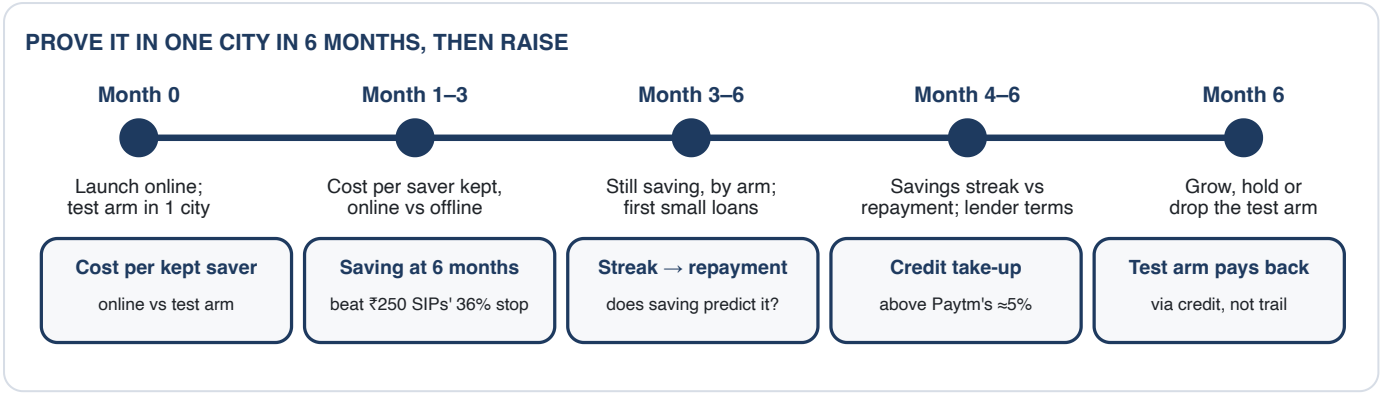

Power move: committed savers + their savings record → credit quality an app built for sign-ups can't match

TABLE STAKES: match Bachatt online in 6–9 months

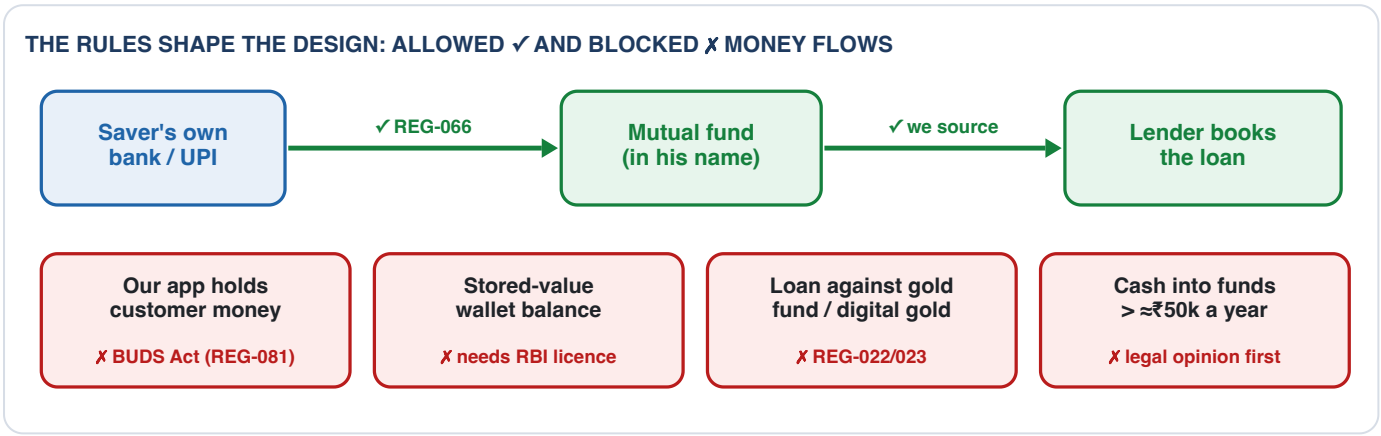

OFFLINE TEST: ~20% of savers, grows only if it pays

CONTESTED: wallet, AI, credit, gold loans

OUR EDGE (to prove): savings record → better credit

7 · Rules and decisions

Decisions for us

① Online-first, with a ~20% offline test arm: agreed?

② Segment: shopkeepers and vendors first? (vendors saved 2.2× drivers, NG-040)

③ Credit path: DSA → share risk → LSP → NBFC. When, and who leads?

④ Kill lines for the 5 pilot gates, agreed now
