Save91 / SaveMore

Working name, to be finalised

Online-first business case

What the numbers say on today's evidence, and the five numbers that change them.

4.1× LTV/CAC

one online saver: ₹450 to win, ₹1,845 back over five years, paid back in month 19

Year 4

EBITDA turns positive on today's evidence (month 40, $2.5M raised, 20,000 savers a month)

Months 37–39

with any one change: ₹200–300 a day, 45% still saving, half applying for loans or ₹300 to win (20,000 savers a month)

$1B by year 5

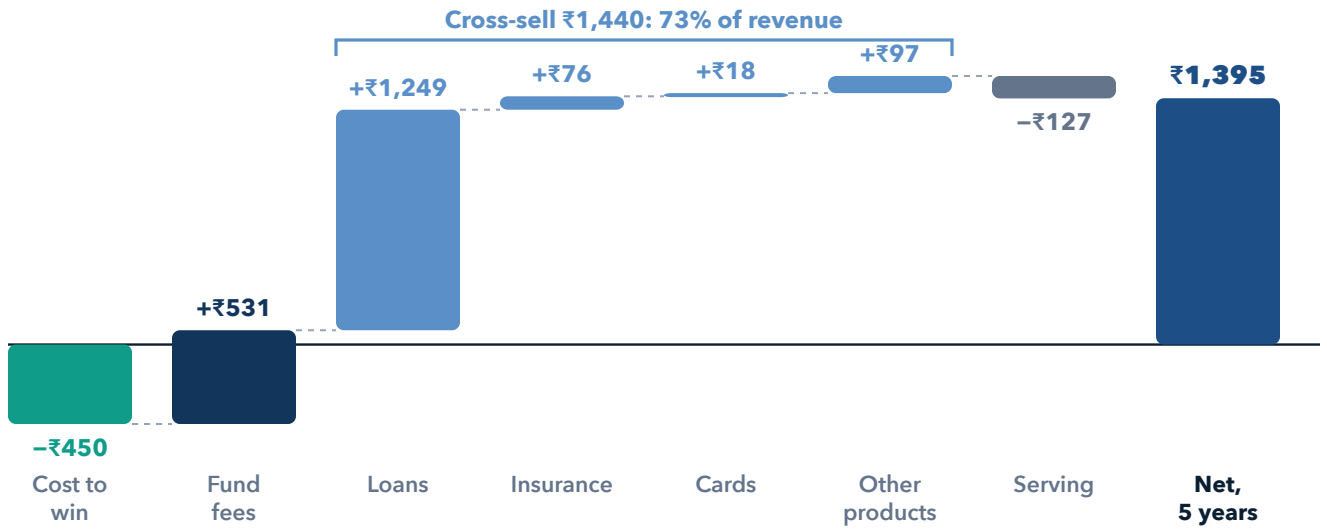

3 of 5 combinations clear $1B on both yardsticks by year 5 (₹300 a day; credit-hungry at ₹200 a day; credit-hungry at ₹300 a day); the cheapest needs $11.5M

Every number comes from one model: monthly groups of savers, each with the same agreed product lines, stacked into a company. Online savers at ₹100 a day; 1 in 10 savers from a doorstep pilot.

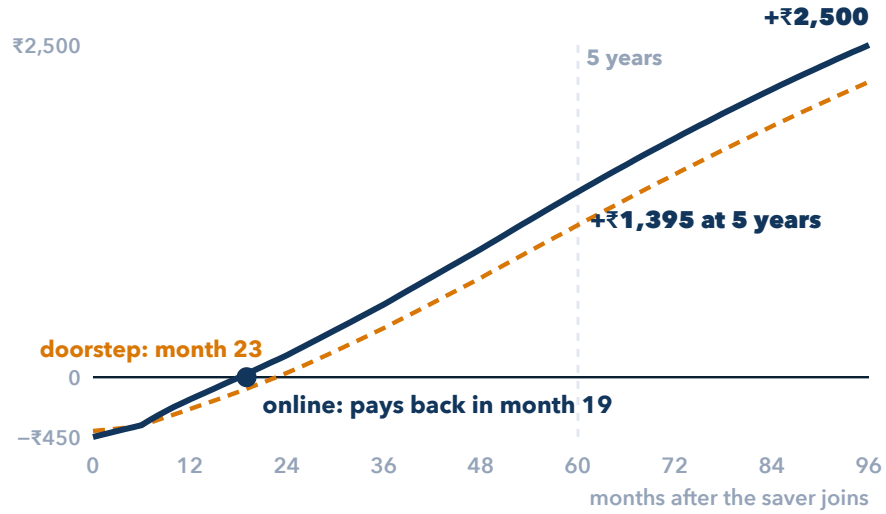

LTV / CAC

A saver won online costs ₹450 and returns ₹1,845 over five years: 4.1× LTV/CAC, paid back in month 19

ONE ONLINE SAVER WON, FIRST 5 YEARS (₹)

WHEN IT PAYS BACK: CUMULATIVE ₹ PER SAVER WON

4.1× in 5 years, 6.6× in 8

LTV/CAC = what a saver brings in, less the cost of serving them, divided by the ₹450 it cost to win them. Undiscounted.

Cross-sell is 73% of revenue

Loans ₹1,249 (personal, home, property, gold, durables), insurance ₹76, cards and other products, on top of ₹531 of fund fees.

Doorstep: 3.8×

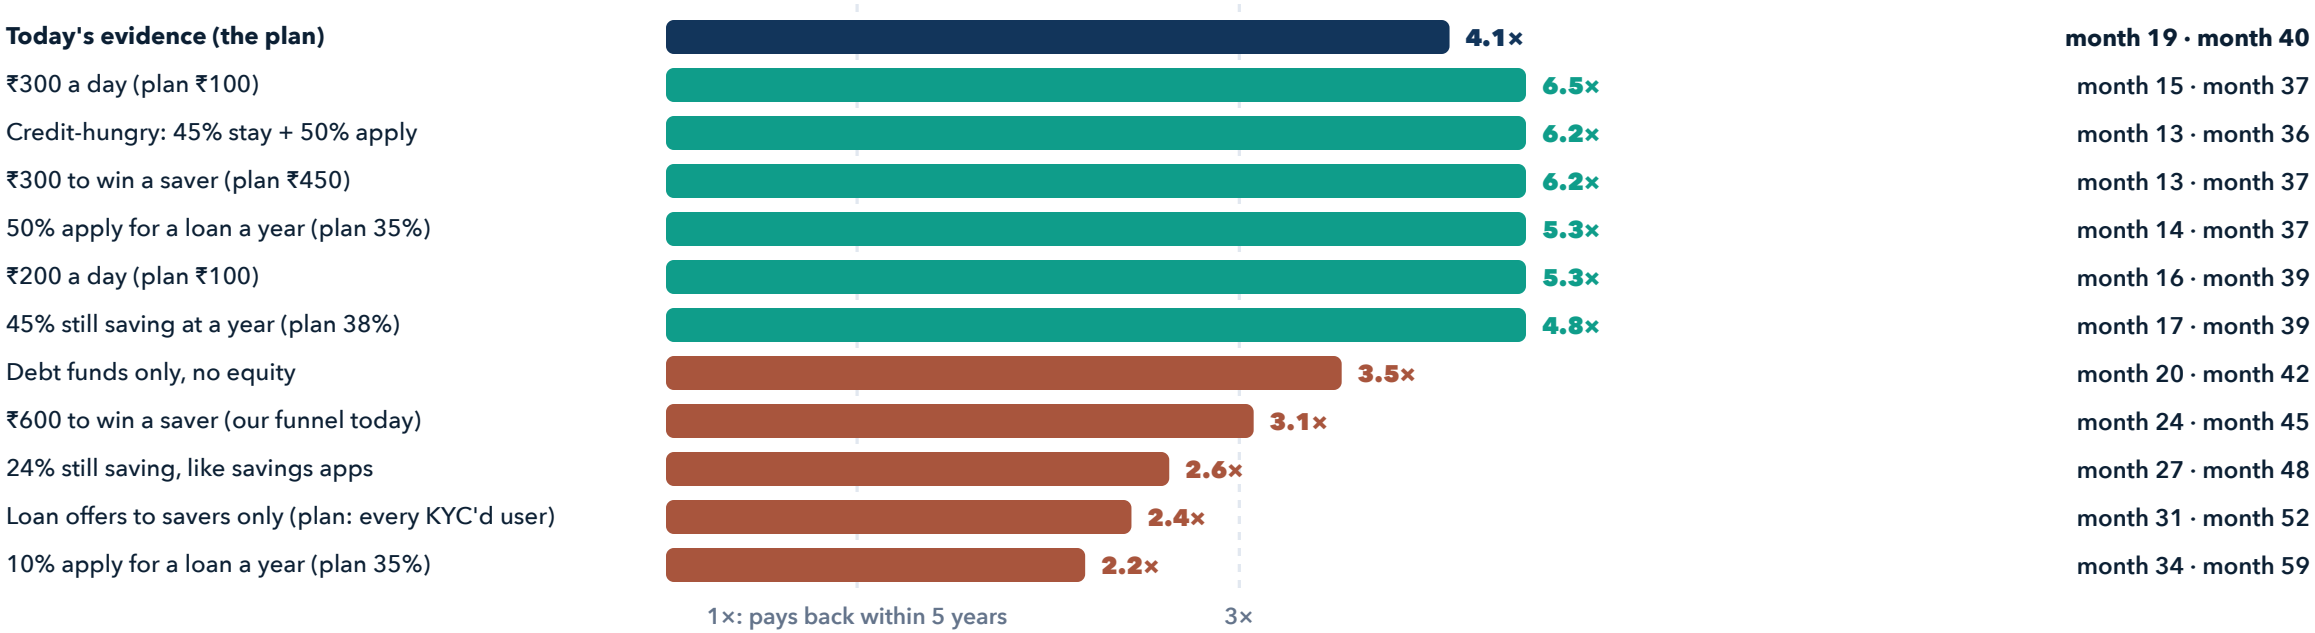

₹404 to win all-in; 55% still saving at a year; pays back in month 23. The 1 in 10 test.

Today's evidence: ₹100 a day; 38% still saving at a year (our extrapolation from SBI MF's ₹250 daily SIP); 80/20 equity and debt funds. Serving = support ₹5 and tech ₹1 a month while saving. Not in this view: the company's fixed costs (team, office, brand) and the 10% contingency, which is why the company turns profitable later than the saver. Every assumption behind this page, with its source, range and effect: the LTV/CAC deck and its live workbook.

LTV / CAC, ONE CHANGE AT A TIME

LTV/CAC is 4.1× on today's evidence; ₹300 a day takes it to 6.5× and ₹300 to win to 6.2×, while savings-app retention cuts it to 2.6×

LTV/CAC OVER 5 YEARS FOR ONE ONLINE SAVER WON, ONE ASSUMPTION CHANGED AT A TIME

Loans move it most

If only 10% apply a year it falls to 2.2×; with offers to savers only (not every KYC'd user) 2.4×.

Cost to win is ours to drive down

Our funnel today is ₹600 (3.1×); the plan needs ₹450; a competitor reports ₹300 (6.2×).

Retention still matters

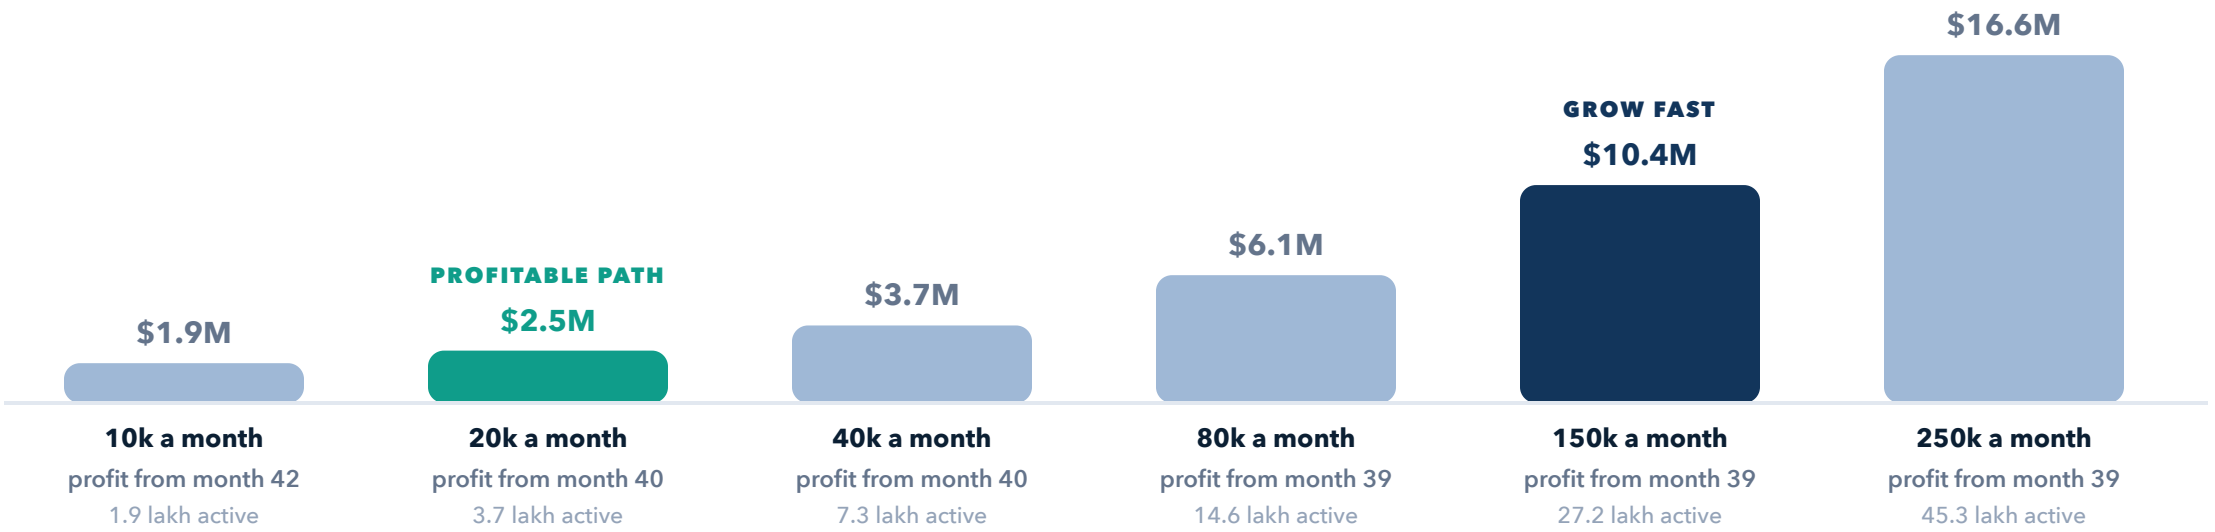

38% is our extrapolation; at 24%, like savings apps, LTV/CAC is 2.6×, because fewer people stay to borrow.

LTV/CAC = a saver's revenue less serving cost over 60 months, divided by the cost to win; undiscounted. Company profitable = the month EBITDA turns positive at 20,000 online savers a month (the plan). The 24% case also lowers month-3 retention to 52%.

TODAY'S EVIDENCE

On today's evidence EBITDA turns positive in months 39–42; $10.4M instead of $2.5M buys 7× the active savers in about the same time

MONEY NEEDED TO REACH PROFIT ($M) AND THE MONTH EBITDA TURNS POSITIVE

From one saver to the company

Each saver pays back in month 19; with the team, tech and office on top, the company turns positive in month 40 at 20,000 savers a month.

Scale buys time

Fixed costs spread: at 1.5 lakh a month profit comes at month 39, for $10.4M.

Year 5 as a whole

Profitable for the whole of year 5 from 10k savers a month; below that, profit starts during the year.

Online savers won a month from month 30 (a straight line from the seed's pace over months 19–30), 1 in 10 savers from the doorstep. Money needed = the deepest cumulative cash hole from month 1 (seed spend included) + a ₹5 crore floor. The 2.5 lakh case stops signing at the pool cap in month 75.

SIDE BY SIDE

Side by side: the profitable path pays from month 40 on $2.5M; capturing 10 crore savers pays from month 38, needs $76M and clears $1B by year 5

	PROFITABLE PATH	GROW FAST	CAPTURE 10 CRORE
Online savers won a month, from month 30	20,000	1.5 lakh	12.4 lakh
Savers won by year 8 (online + doorstep)	16.4 lakh	1.2 crore	10.0 crore
Active savers, year 5 / year 8	3.7 lakh / 5.4 lakh	27.2 lakh / 40.0 lakh	2.3 crore / 3.3 crore
Money saved with us, year 8	₹2,951 Cr	₹21,560 Cr	₹178,001 Cr
Revenue, year 5 / year 8	₹39 Cr / ₹77 Cr	₹282 Cr / ₹568 Cr	₹2,321 Cr / ₹4,694 Cr
EBITDA, year 5 / year 8	₹18 Cr / ₹52 Cr	₹146 Cr / ₹408 Cr	₹1,283 Cr / ₹3,548 Cr
EBITDA positive from month	**40**	**39**	**38**
Money needed in all (seed included)	**$2.5M**	**$10.4M**	**$76.4M**
20× revenue run-rate / 0.45× money saved	₹913 Cr / ₹497 Cr	₹6,642 Cr / ₹3,510 Cr	₹54,805 Cr / ₹28,844 Cr
$1B (₹9,500 Cr) on both	no	no	**yes**
Doorstep agents / team, year 5	23 / 30	167 / 173	1,381 / 569

What capturing 10 crore takes: a third of a 30 crore segment (a competitor's figure; our agreed pool is 7 crore), so 12.4 lakh new online savers every month. At today's 1 in 5 sign-ups saving that needs 46 crore sign-ups, more than the segment: it works only if about 1 in 3 start saving, at ₹450 each. Team costs follow the same rules, so they are likely understated.

Today's evidence for every plan; each starts from the seed (months 1–18) and grows flat from month 30. Revenue, EBITDA and money in ₹ crore or $ million; undiscounted.

WHAT MOVES THE PROFIT MONTH

The plan turns positive in month 40; ₹300 a day brings it to month 37, while savings-app retention or debt-only funds push it to months 52–59

AT 20,000 ONLINE SAVERS A MONTH (THE PLAN): THE MONTH EBITDA TURNS POSITIVE, AND THE MONEY IT TAKES IN ALL

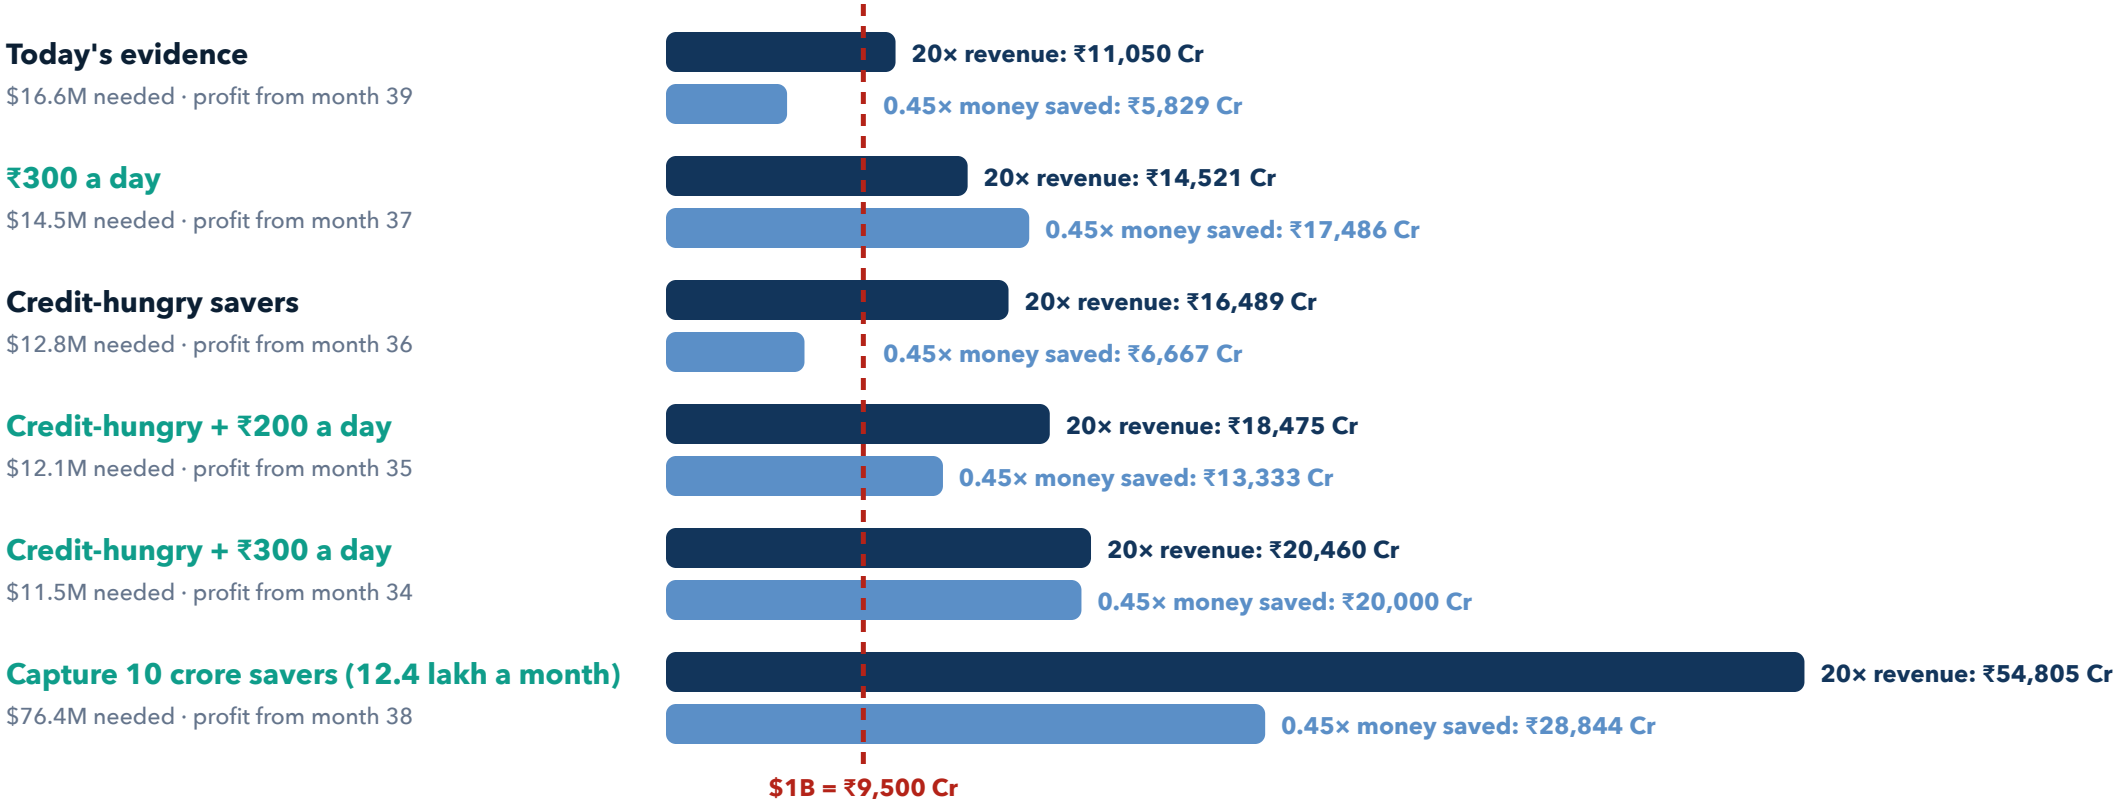

One assumption changed at a time (the 24% case also lowers month-3 retention to 52%), everything else at the plan's values. Year 5 is months 49–60 — the seed measured the years that matter most (see the seed page).

$1B BY YEAR 5

3 of 5 combinations clear $1B on both yardsticks by year 5 (₹300 a day; credit-hungry at ₹200 a day; credit-hungry at ₹300 a day); the cheapest needs $11.5M

VALUE AT MONTH 60, ₹ CRORE: FIVE CASES AT 2.5 LAKH ONLINE SAVERS A MONTH, AND THE 10-CRORE PATH. $1B ONLY IF BOTH BARS CLEAR THE LINE

Five cases at 2.5 lakh online savers a month from month 30, and the 10-crore path at 12.4 lakh a month (the side-by-side page; 30 crore segment, a third captured); 1 in 10 savers from the doorstep. Yardsticks: 20× the month-60 revenue run-rate; 0.45× money saved (a little below the ~0.5× a recent savings-app round paid on money invested). Sign-ups stop at 20% of a 7 crore pool in month 75.

THE FIVE NUMBERS

The $0.5M seed measures the five numbers that decide whether the next round is about $2.0M or $9.9M

1

Cost to win a saver

₹600 in the seed (our funnel today); ₹450 planned after, the midpoint of a competitor's ₹300 and our ₹600.

₹300: month 37. ₹600: month 45.

2

Still saving at 12 months

38% online is the plan: profit in month 40.

45%: month 39. 24% (savings apps): month 48.

3

Daily amount

₹100 is the plan, and our assumption.

₹200: month 39; ₹300: month 37.

4

Who borrows

35% of KYC'd users apply a year, 30% approved: the plan.

10%: month 59; 50%: month 37; savers only: month 52.

5

Doorstep arm

55% still saving earns ₹1,717 a saver.

Without it: profit in the same month (40). It must beat online's 38% clearly to earn its place.

HOW THE SEED GETS THERE

$0.5M

the seed: build, licences, a lean team, the doorstep pilot

1 lakh

sign-ups in months 4–18 to read the five numbers

Months 16–18

12 months of data on the first savers; raise the next round (the seed budget runs to month 24 if it is late)

$2.0M or $9.9M

the next round: profitable path or grow fast ($2.5M or $10.4M in all)

The seed is not a profit plan. It buys five measurements: the profitable path is the floor, growing fast is the upside, and the numbers decide which.

Profit months at 20,000 online savers a month (the plan), one assumption changed at a time. The seed plan, a separate document, has the team and the use of funds.

ASSUMPTIONS

Every input, and where it comes from

INPUT	VALUE	BASIS
Online saver	₹100 a day, ~20 debit days a month; 80% still saving at month 3, 38% at a year	₹100 is our assumption (Bachatt's stated minimum). Retention: our extrapolation from SBI MF's ₹250 daily SIP for first-time investors (36% of a year's sign-ups stopped within it); savings apps' 24% is the downside
Doorstep saver	Same product; 80% still saving at month 3, 55% at a year; 100 sign-ups per agent a month, each counted as a saver	Agreed street inputs; the agent sets the mandate at sign-up. A competitor's street team reports 100–125 a person a month. All-in cost ₹404 a saver at scale
Funds	80% equity SIP / 20% debt; returns 10% / 7% a year; fees 0.75% / 0.35% of balance	Mix from a practitioner conversation (not yet a filed research row); fees from fund-house disclosures; the equity return is our estimate
Cost to win a saver	₹600 during the seed (our funnel), ₹450 after; range ₹300–600	₹450 sits between a competitor's reported ₹300 per customer (per sign-up or per saver not stated) and our own funnel's ₹600; the seed measures it
Loans	Offers to every KYC'd user (2.5 per online saver) from day 1; 35% apply a year (70% personal or business, 15% gold, 3% property, 2% home); 30% of first applications approved, 70% of repeats; ₹1 lakh personal/business loan at a 2% payout rising to 3%	Founders' choice on reach and apply rate; payouts at DSA norms (1–2.5% personal and business, 0.5–1.5% property, 0.25–1.5% gold); tickets from digital NBFC, merchant-loan, gold-loan and micro-LAP data (research/xs_funnel_2026-10-21.csv)
Other products	Cards, insurance (at IRDAI's draft caps), recharge, bills, FD, gold-loan and property-loan referrals	Agreed take-up and commission inputs; property and home loans now sized from micro-LAP and affordable-housing lenders
Team	Seed: 2 founders at $1,000 a month + 3 hires. After the round: founders ₹1.5L, hires by active savers	Seed plan; agreed salary inputs, +10% statutory, +7% a year
Other costs	Tech ₹1.5L a month + ₹1 per active saver; office; compliance ₹25L a year after the round; brand ₹2L a month; 10% contingency on every cost	Agreed inputs and the agreed 10% contingency; per-saver tech and the ₹25L compliance are our estimates
Growth limit	At most 20% of about 7 crore urban self-employed ever signed	PLFS shares (agreed pool) and the agreed 20% cap
